Melan A

Melan A

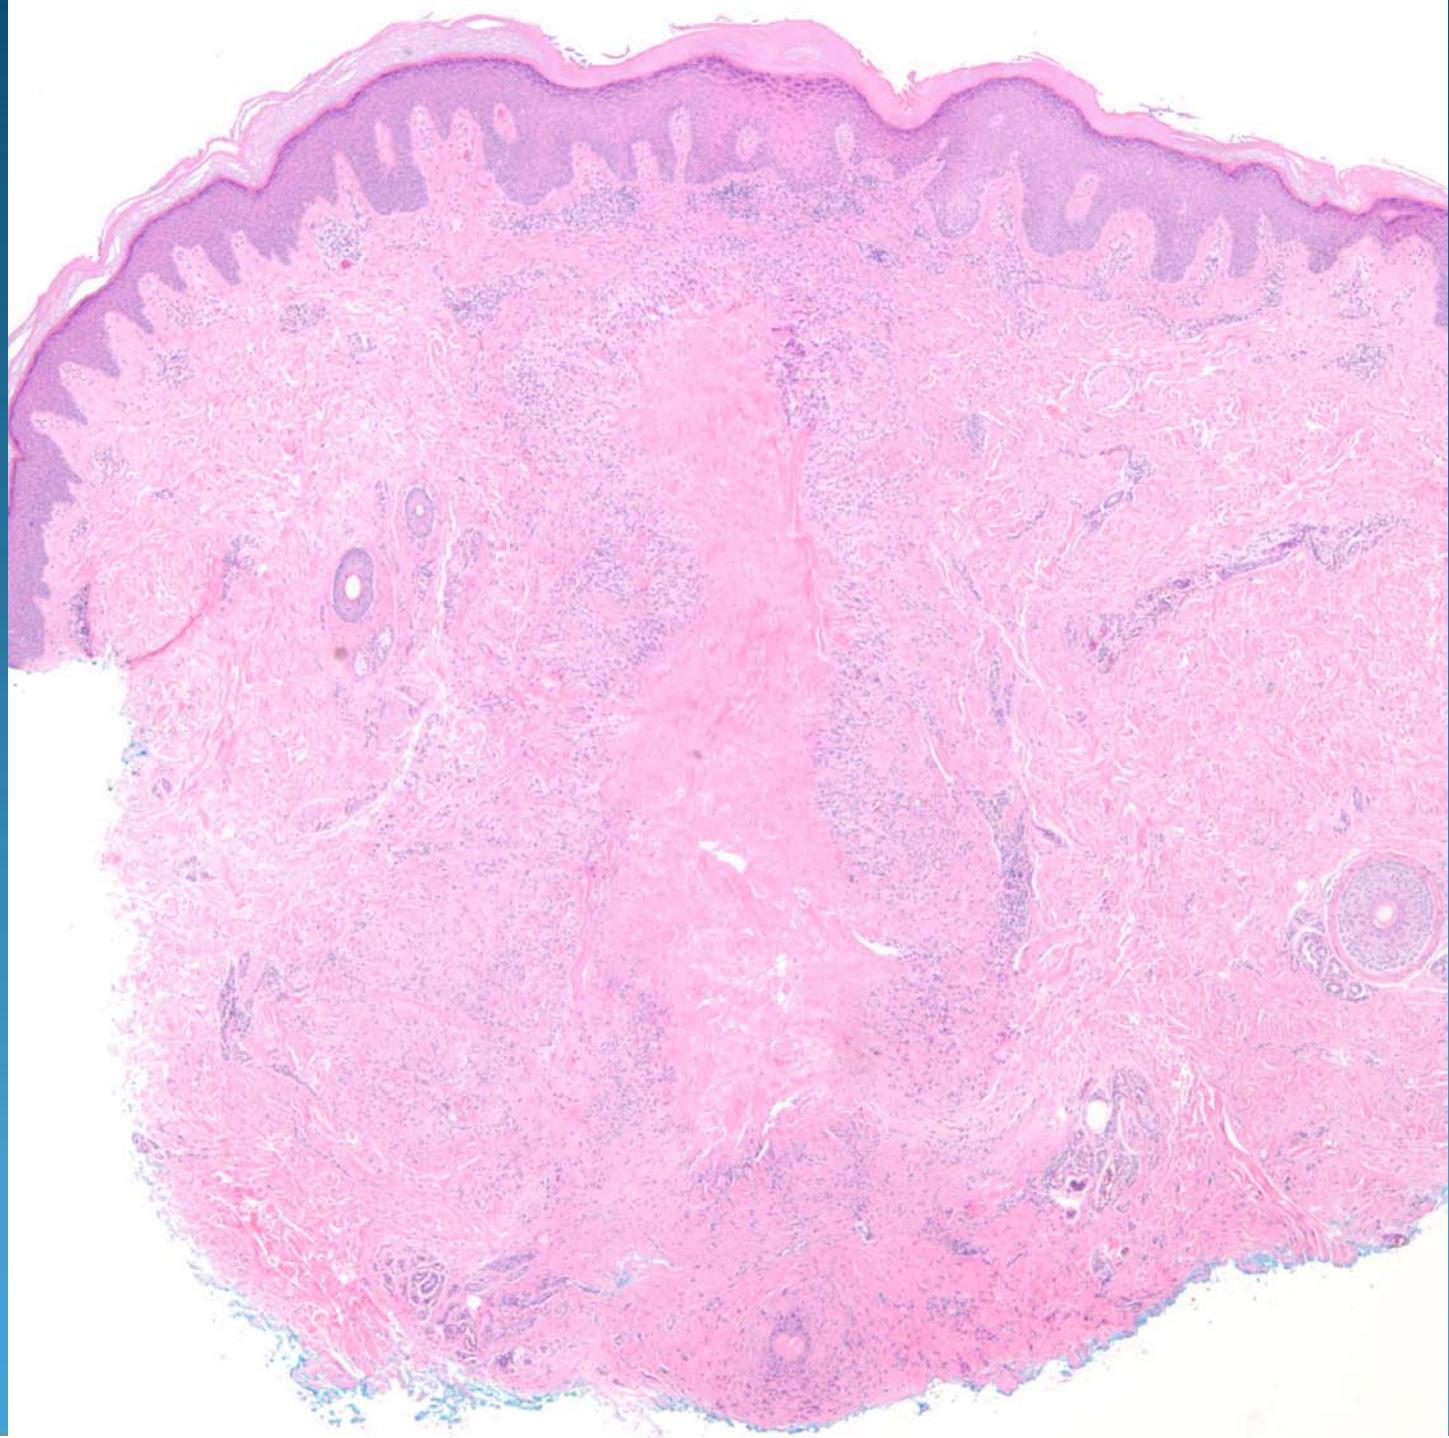

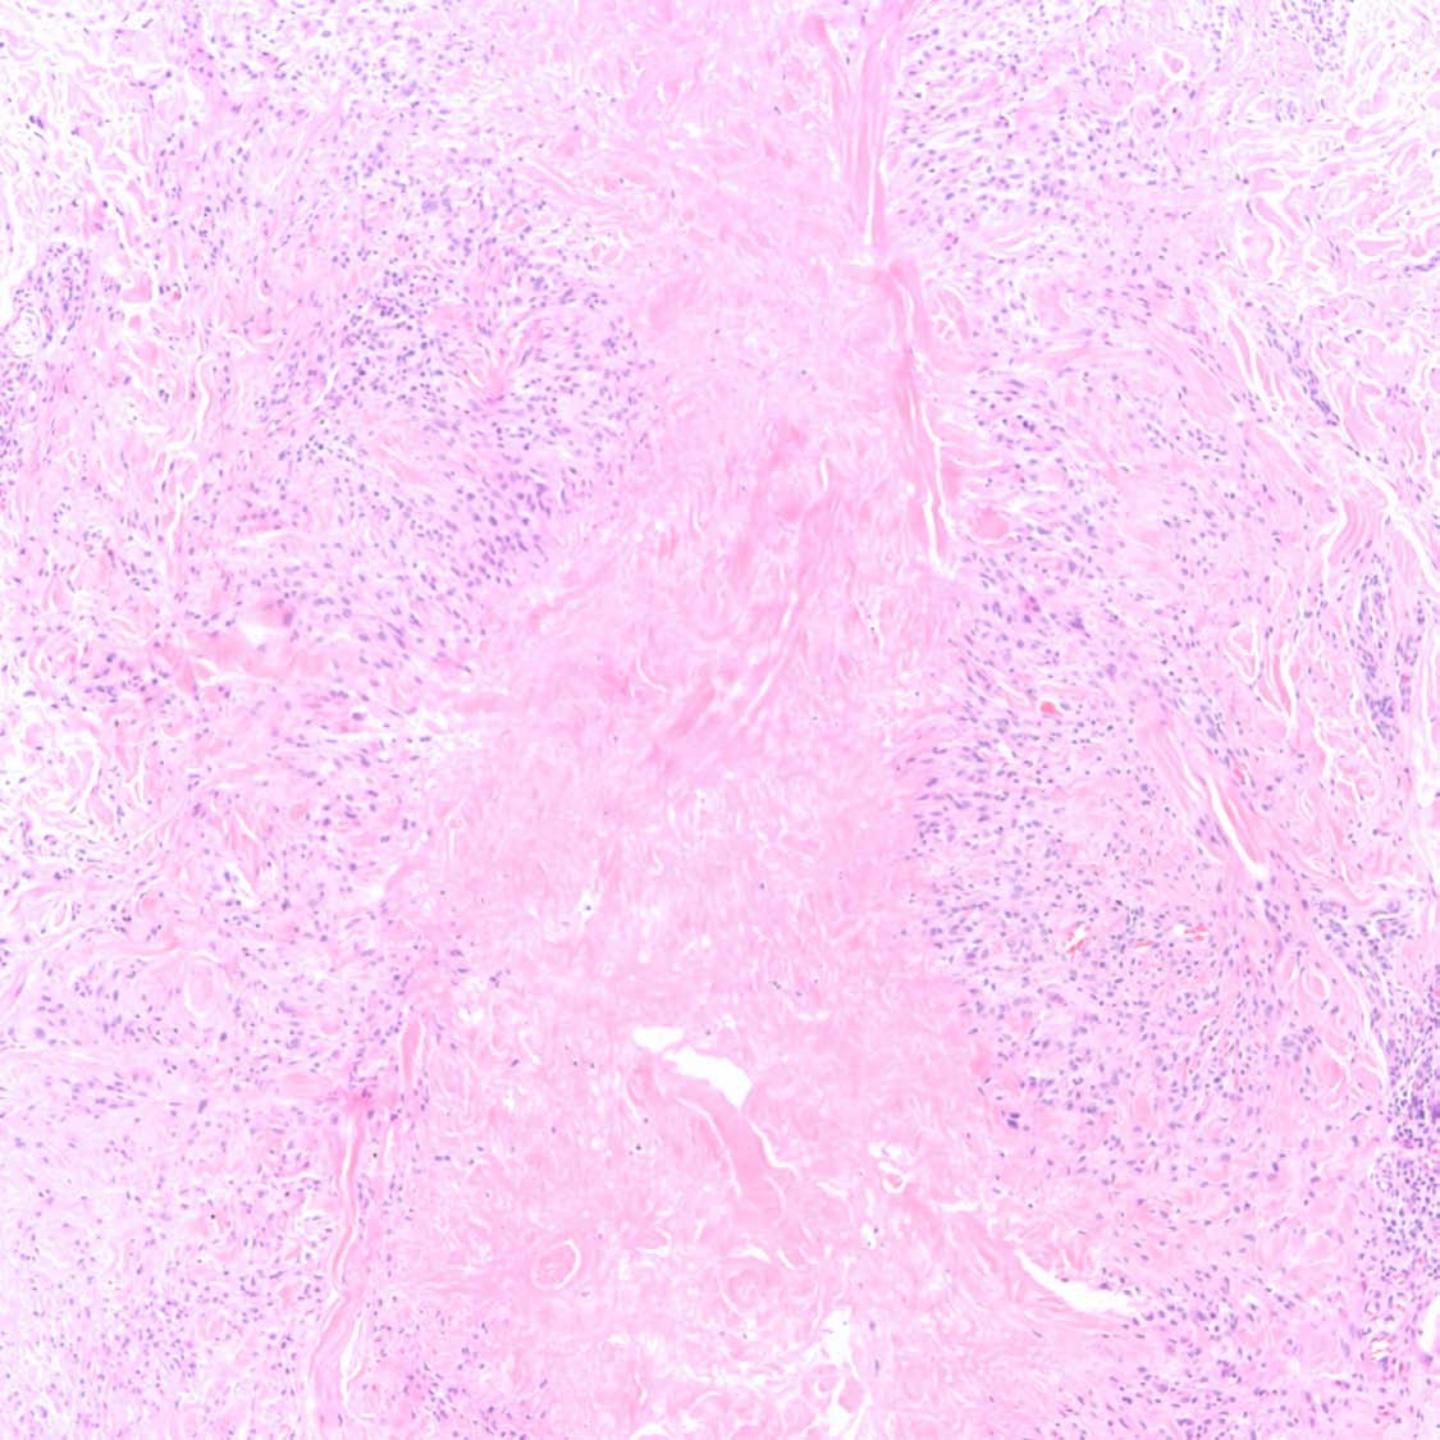

Melanocytic Nevus, Neurotized

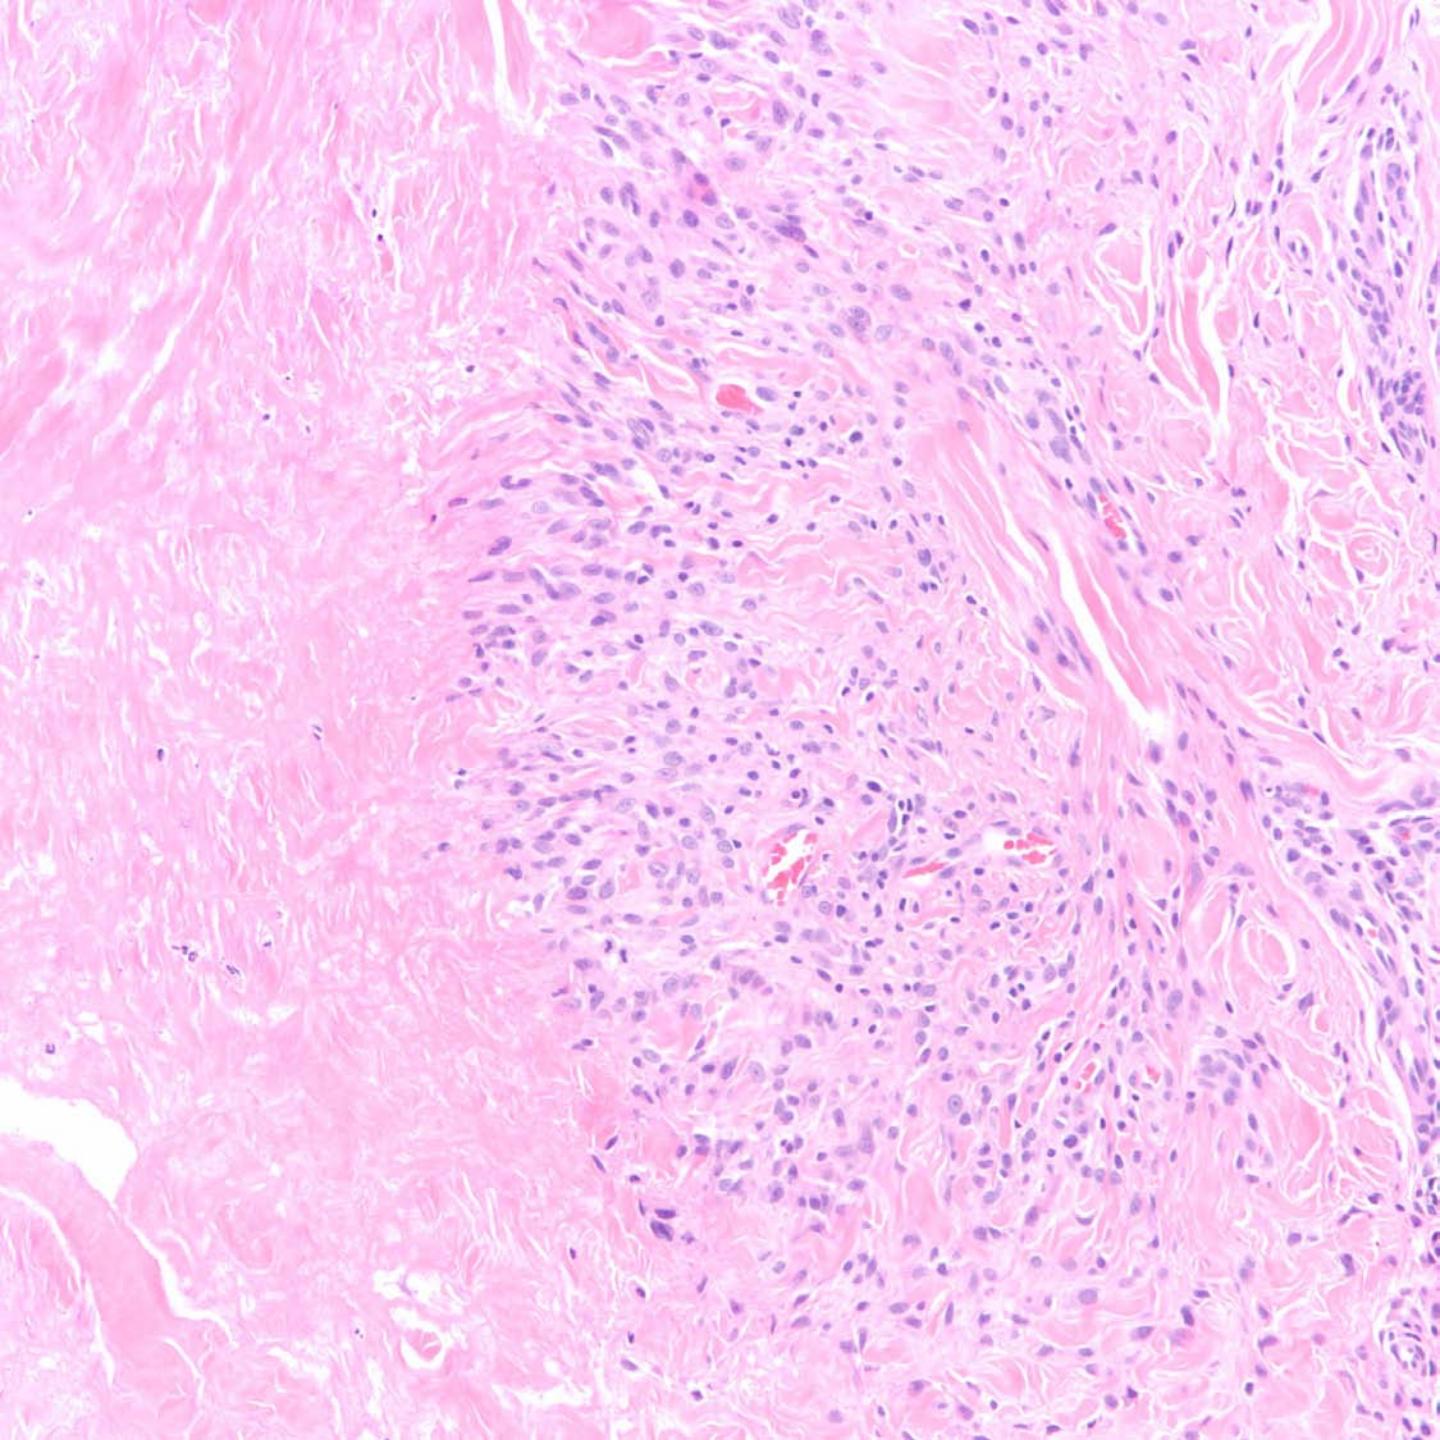

Pearls

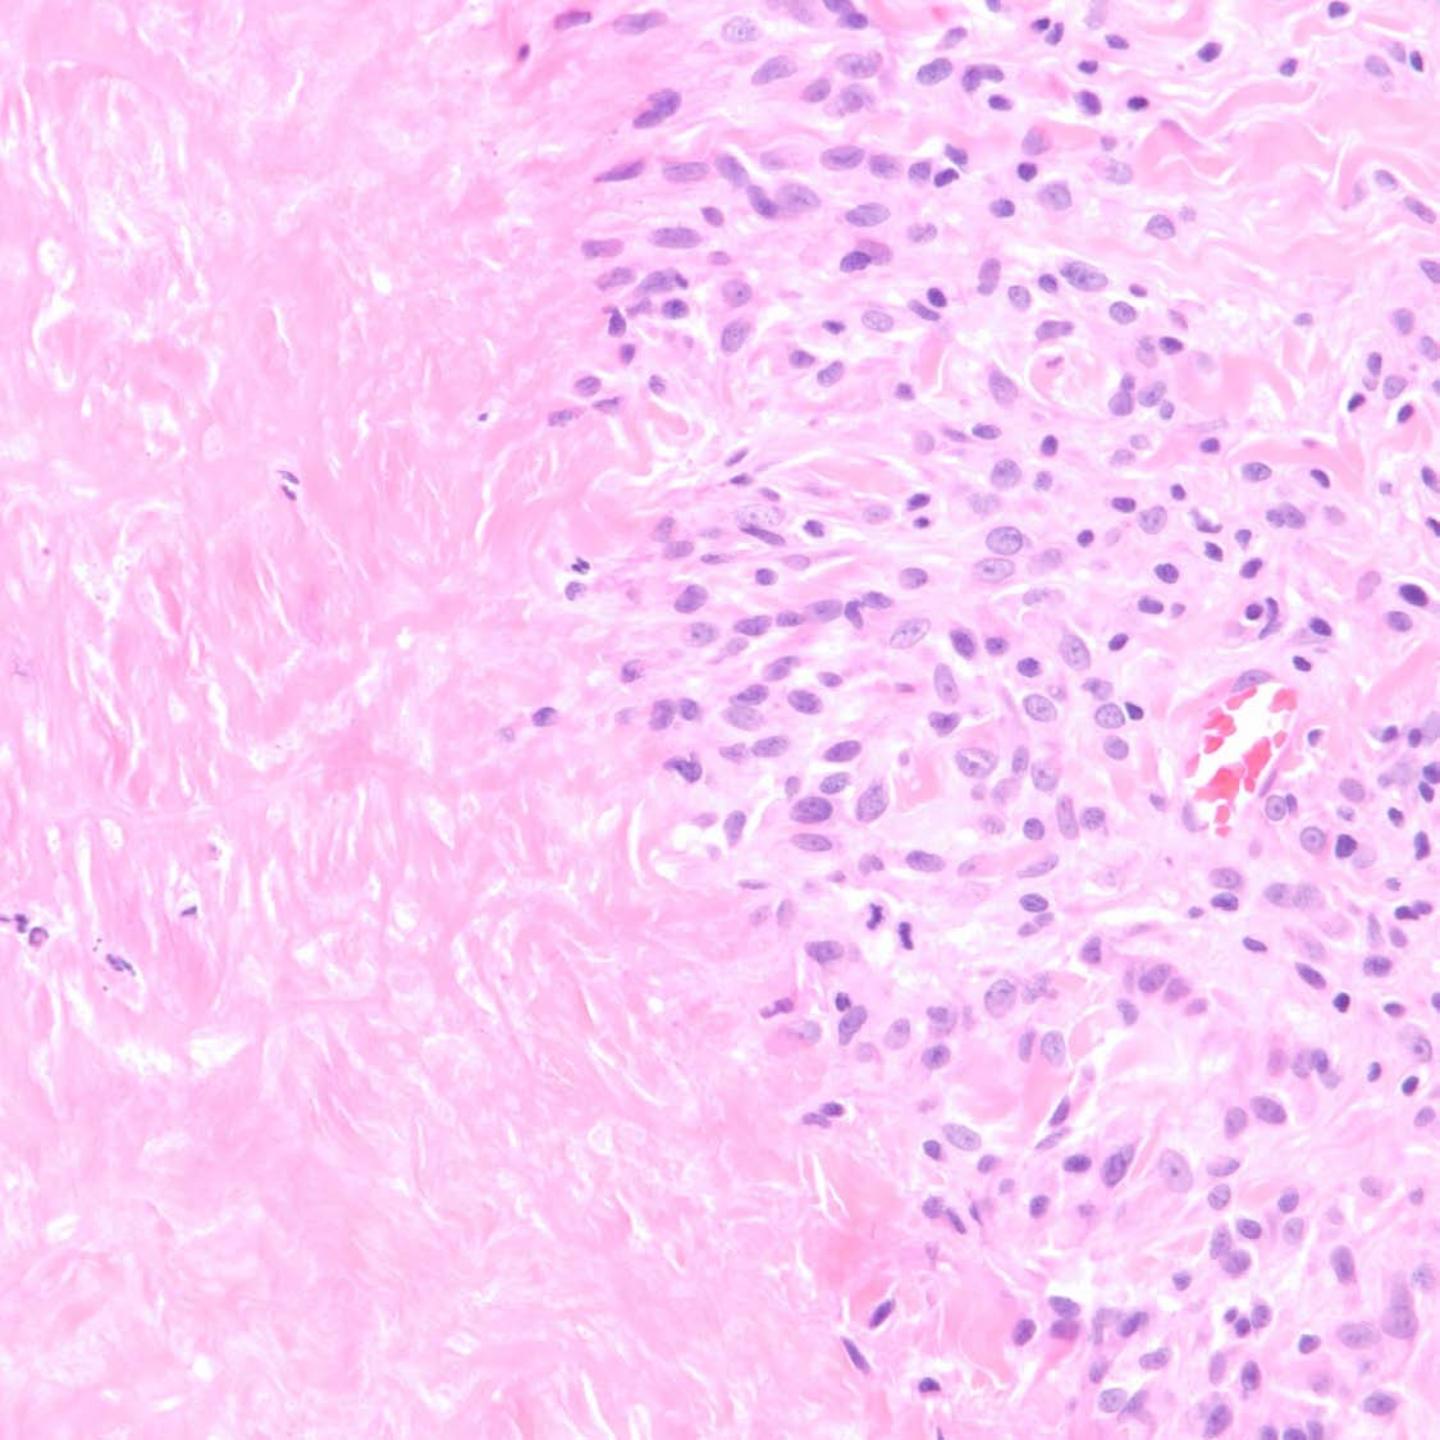

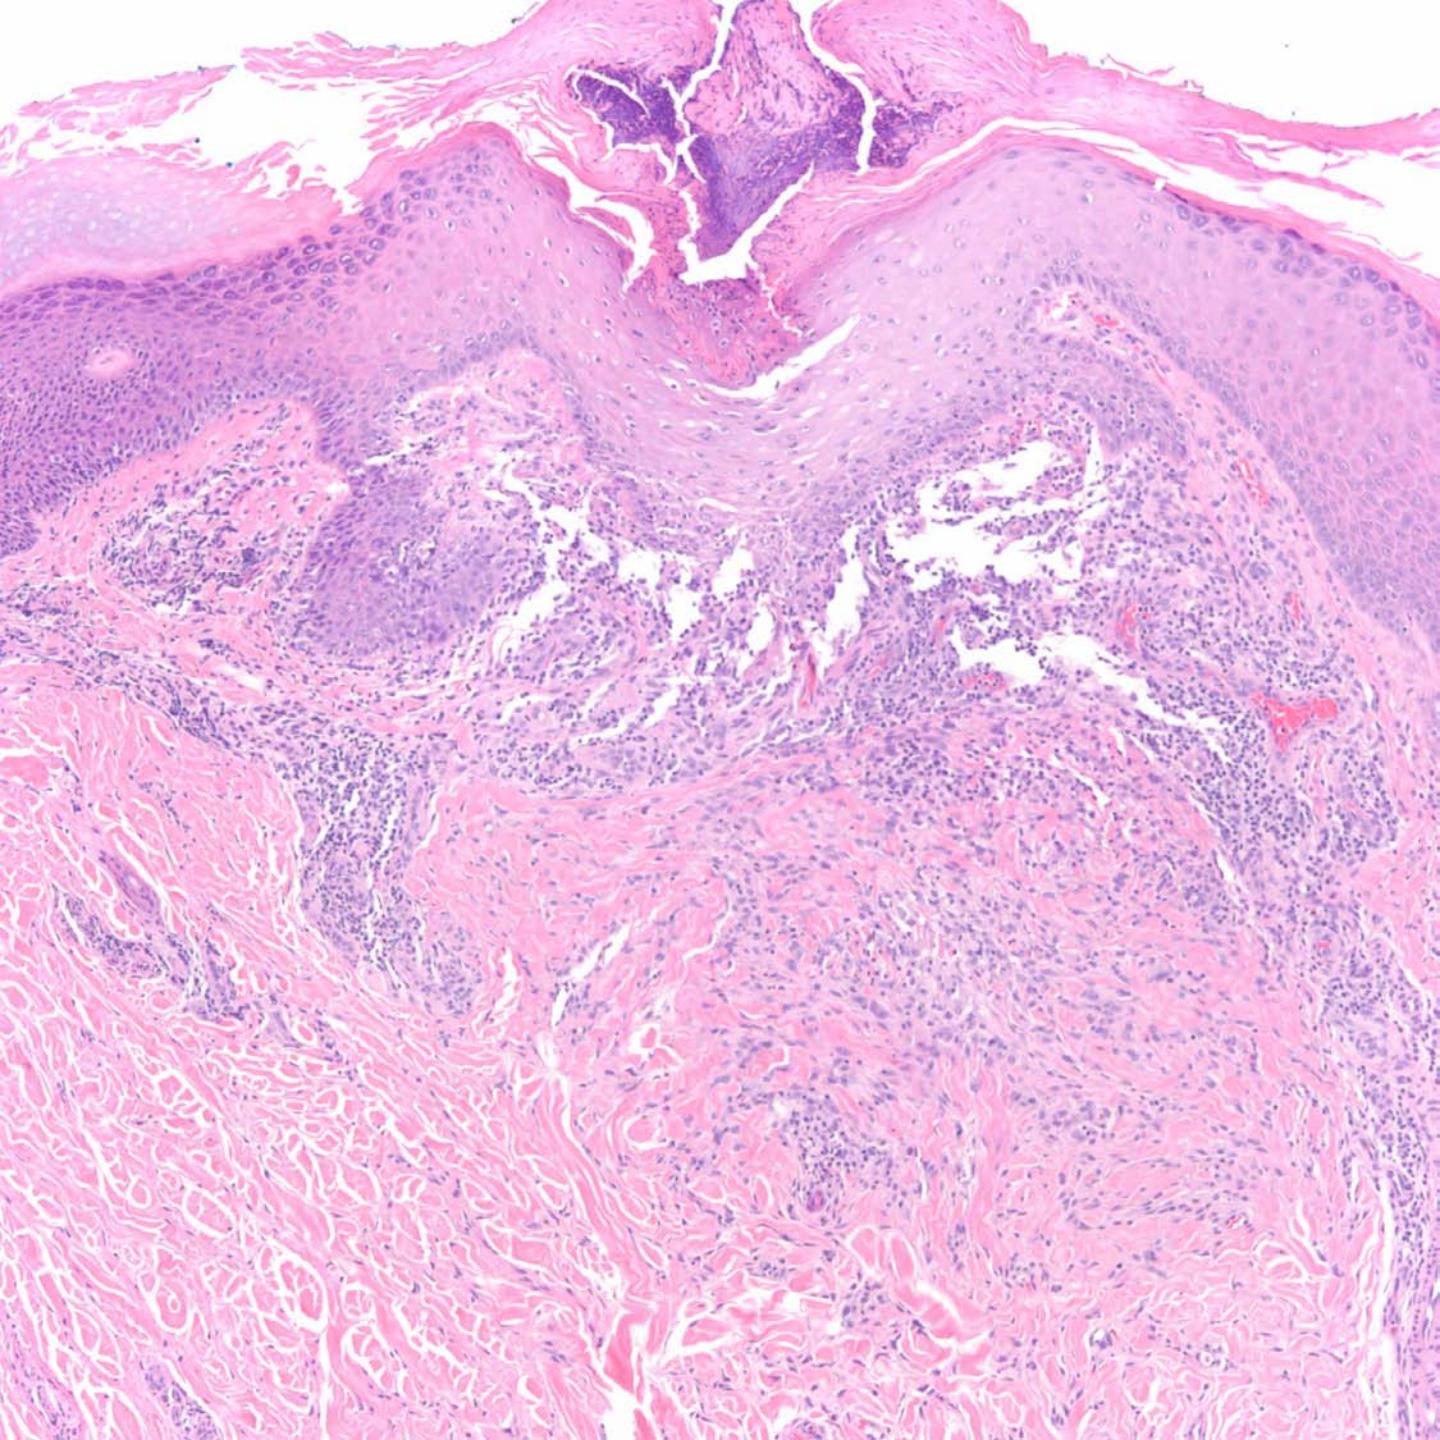

- Often resembles neurofibroma but absent nerve roots
- Type C nevus cells resembling Schwann cells
- May see transition with conventional melanocytic nevus

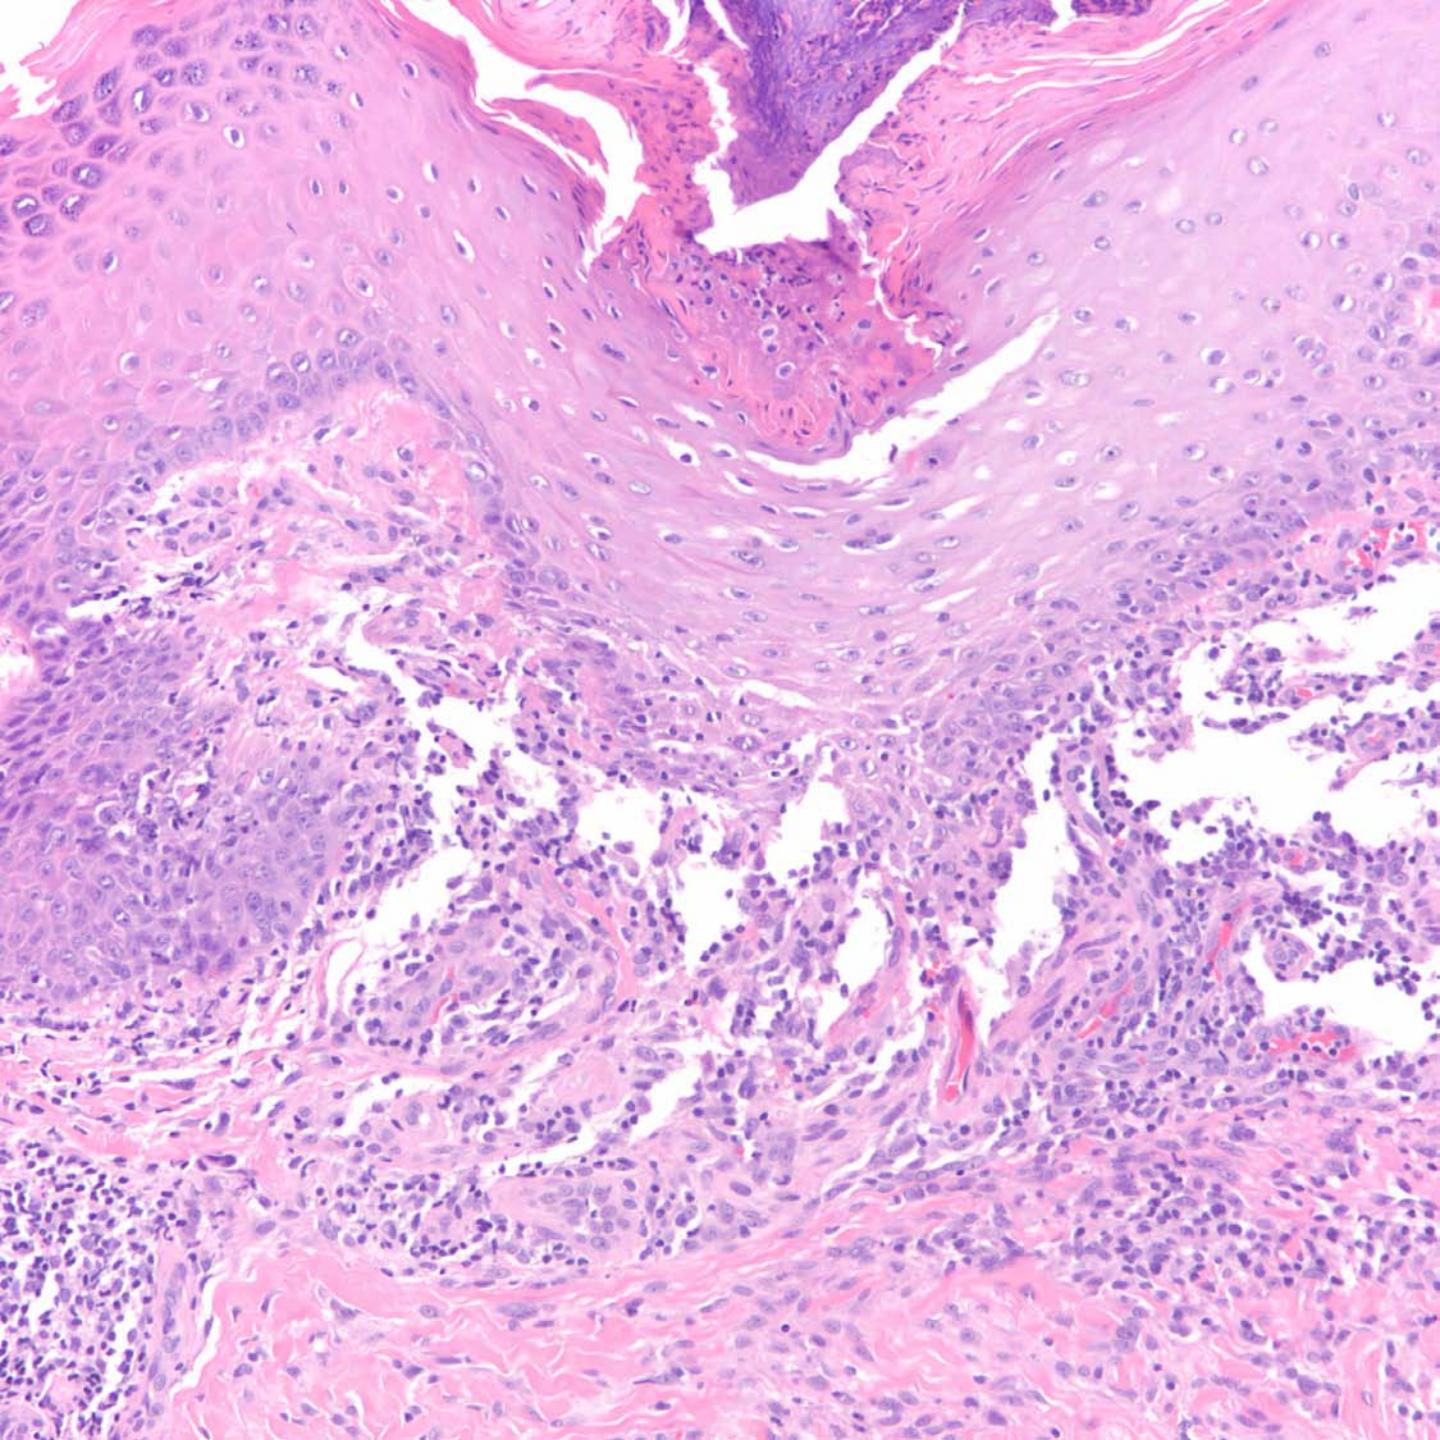

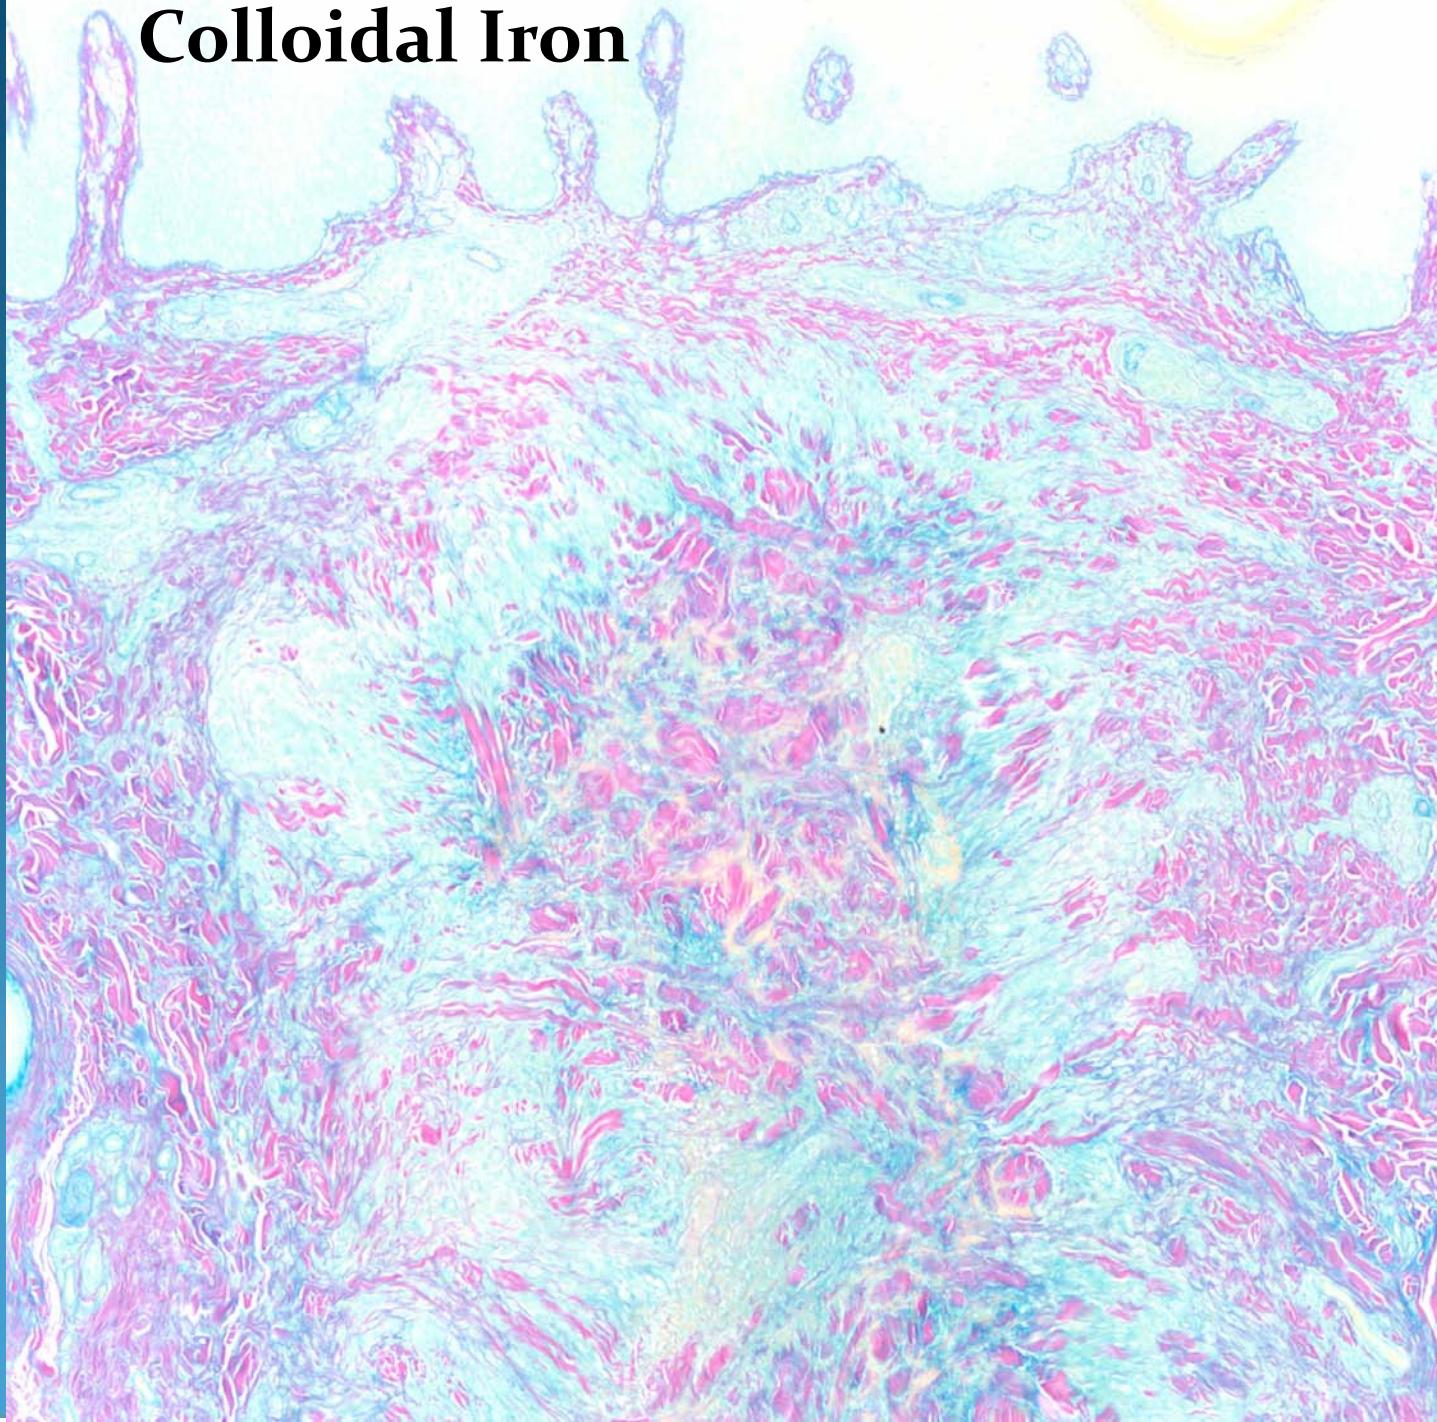

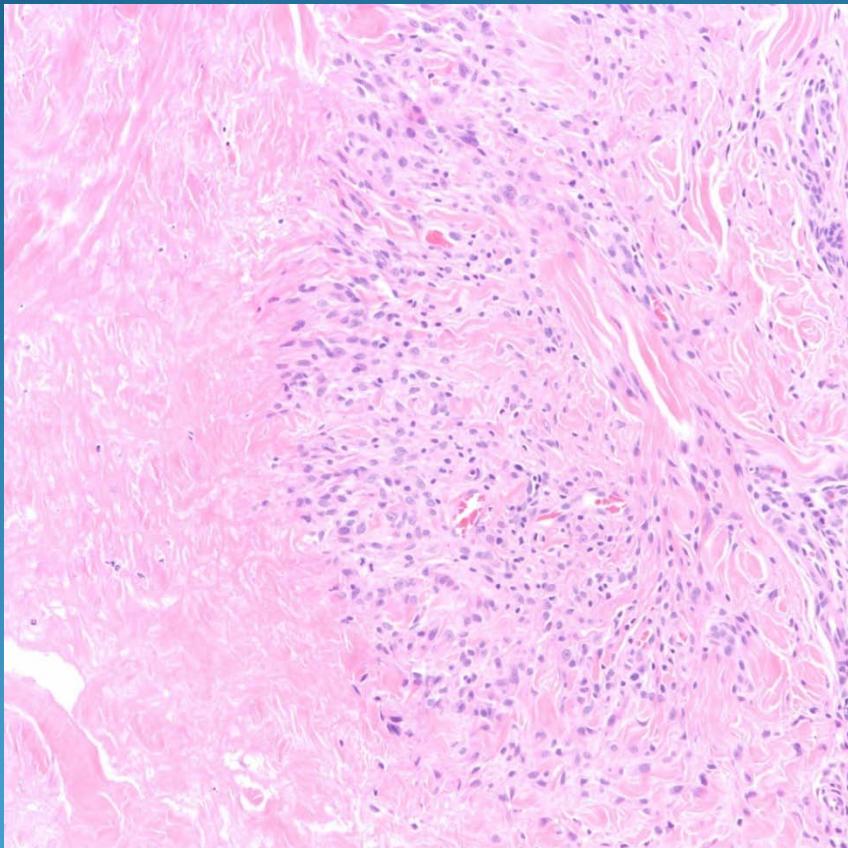

Granuloma annulare with performation

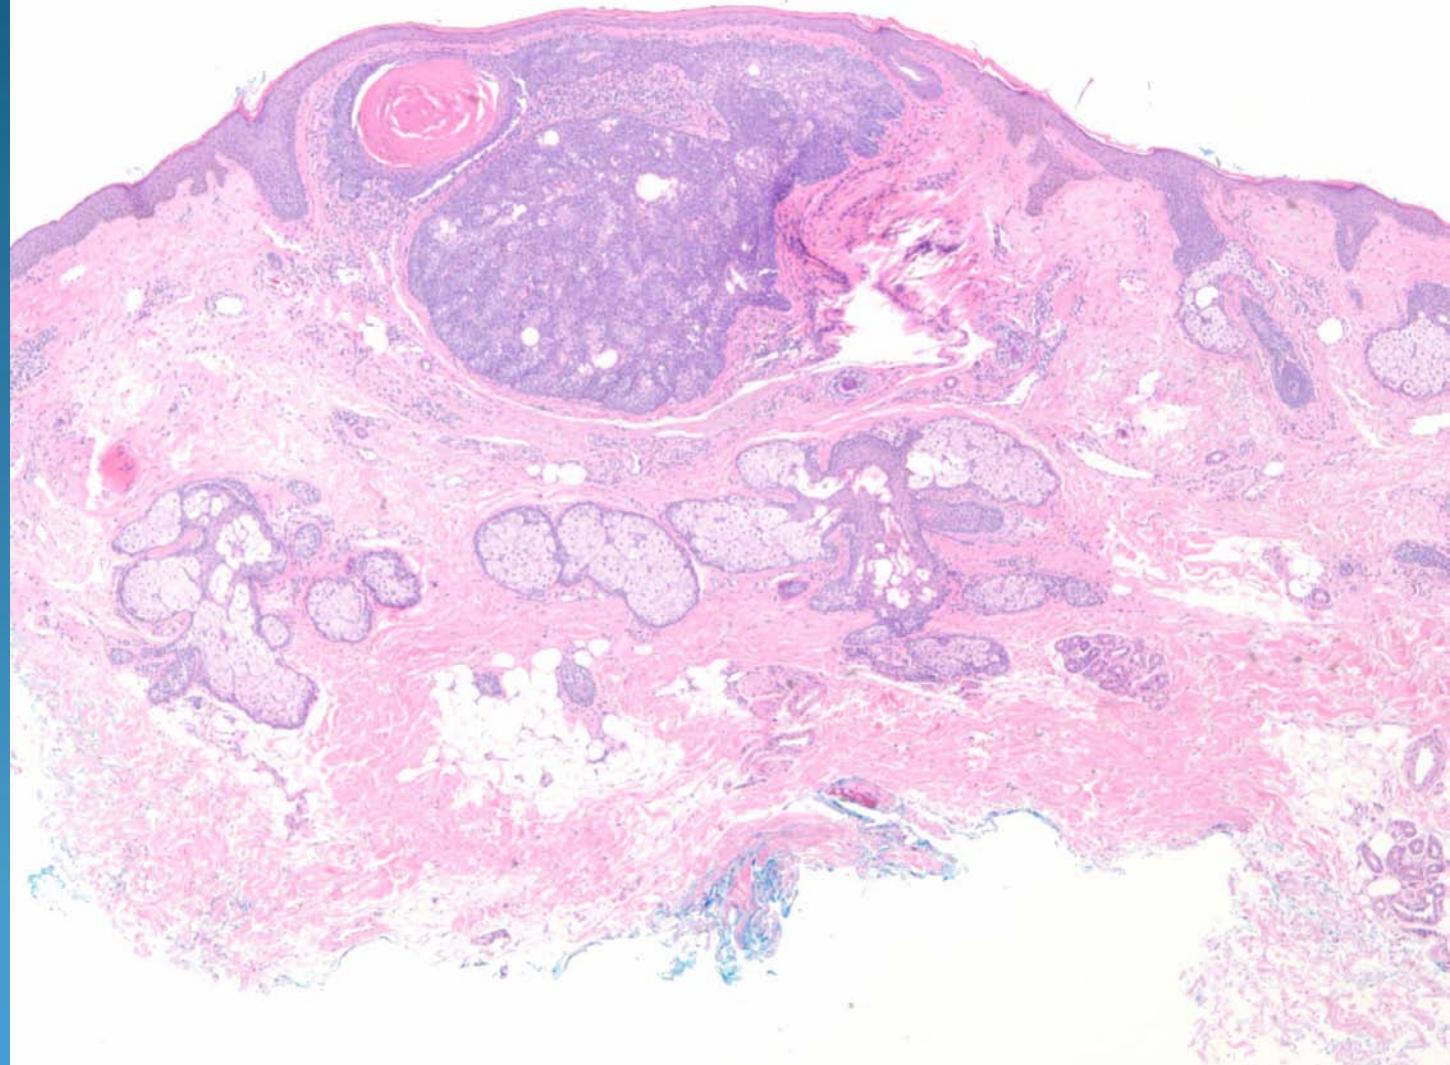

Colloidal Iron

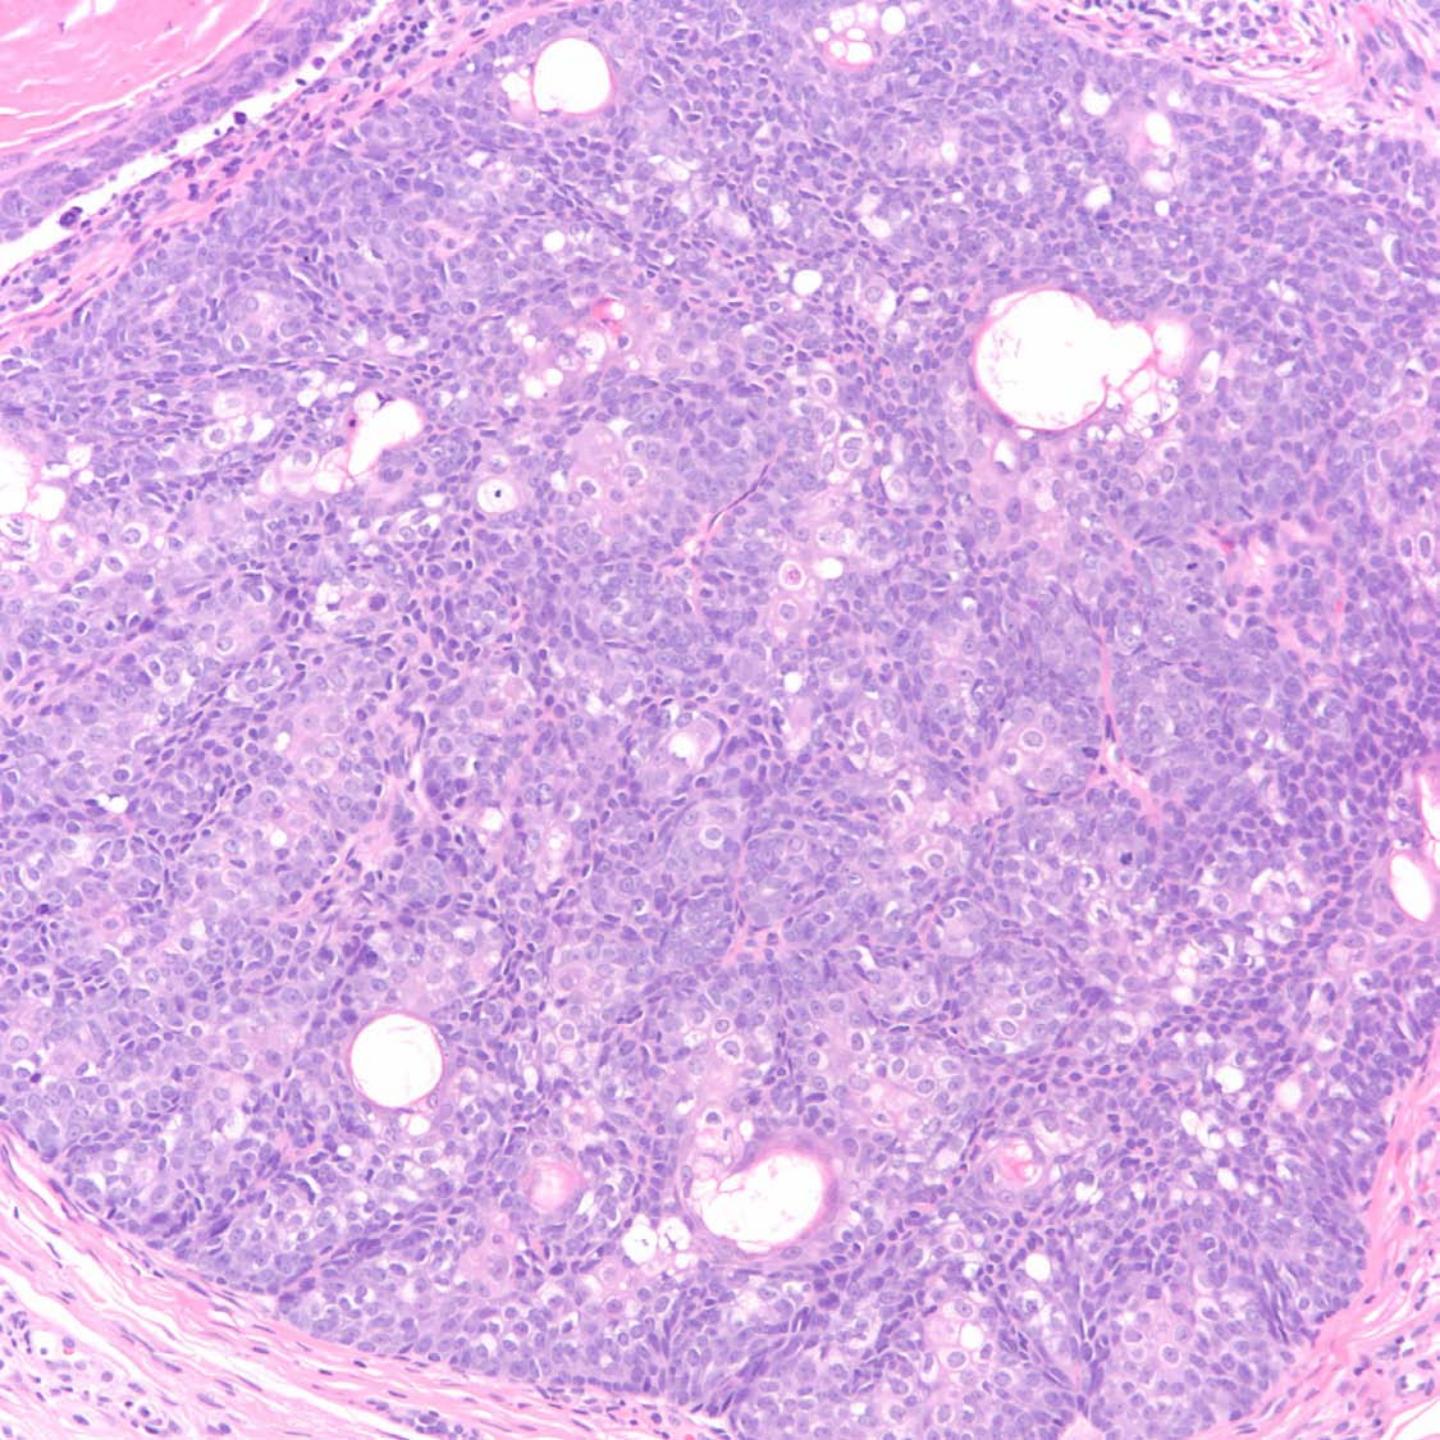

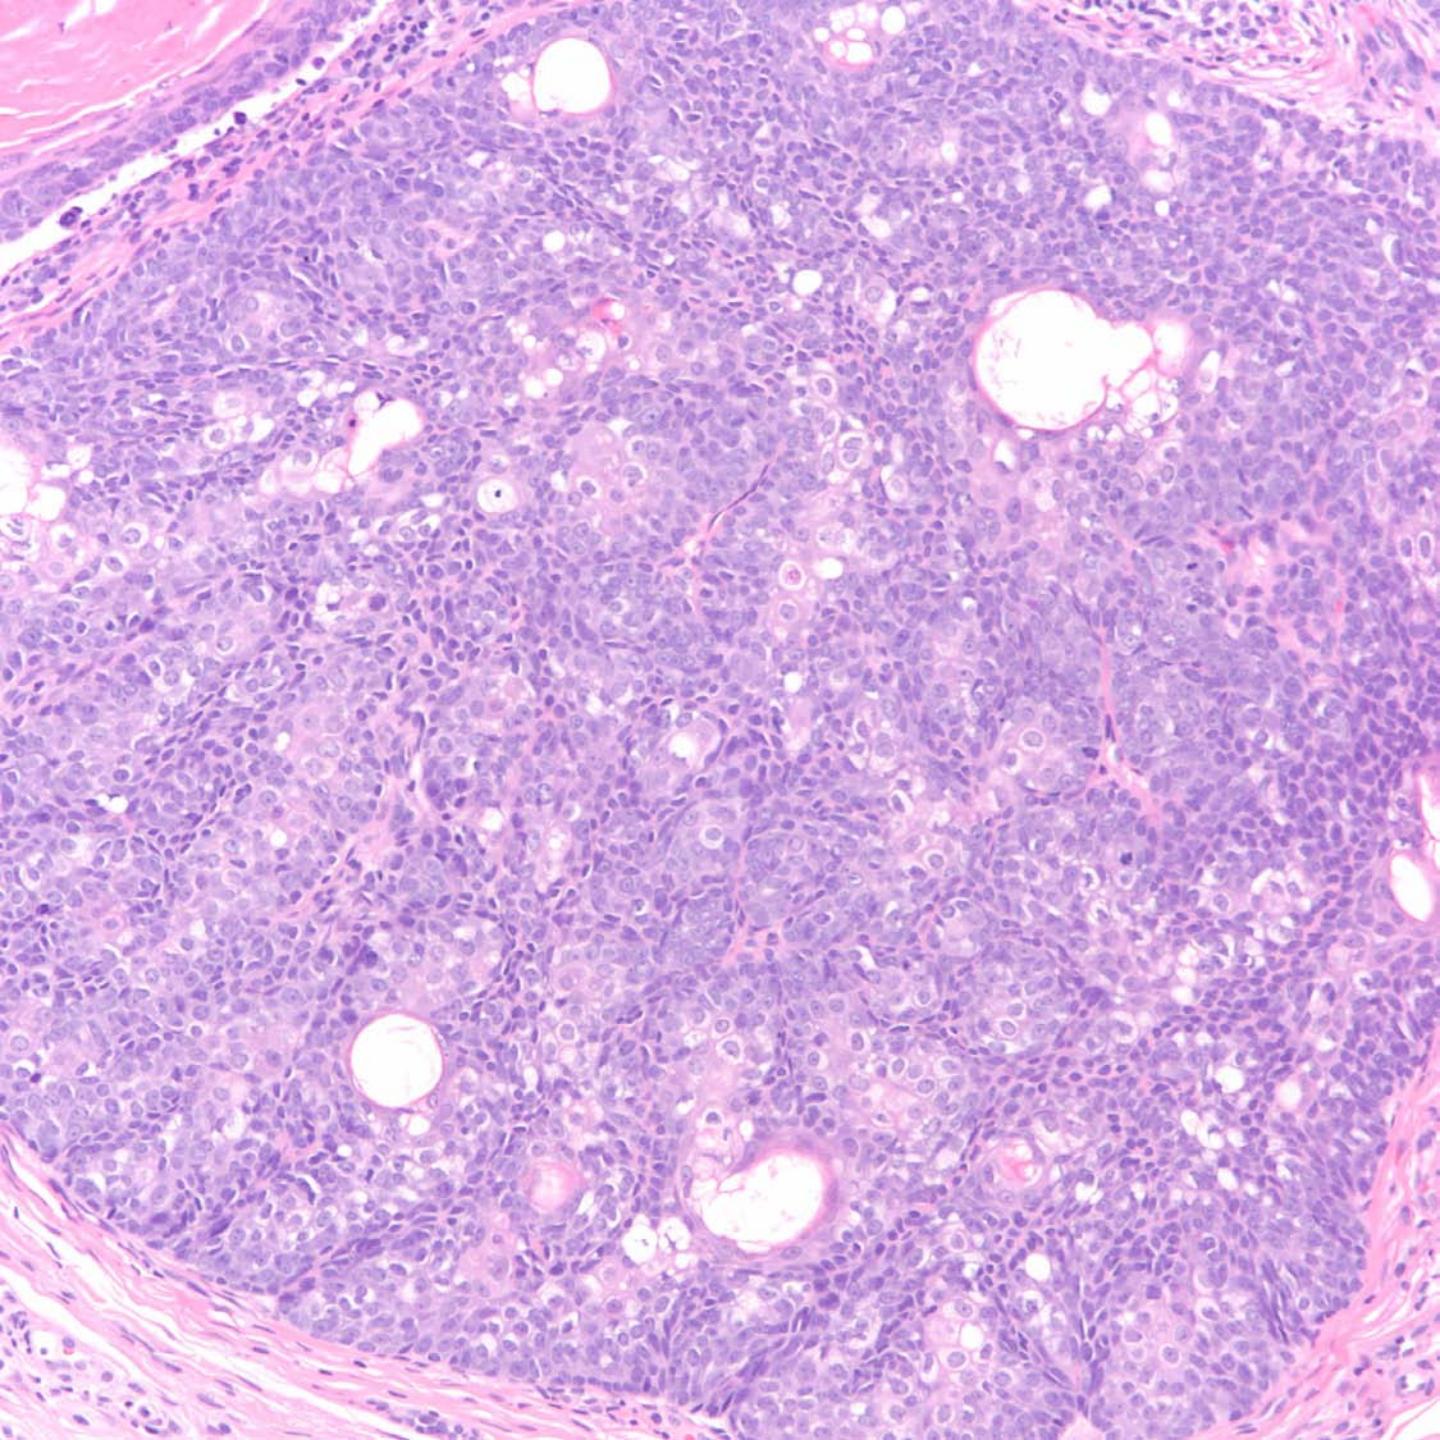

Pearls

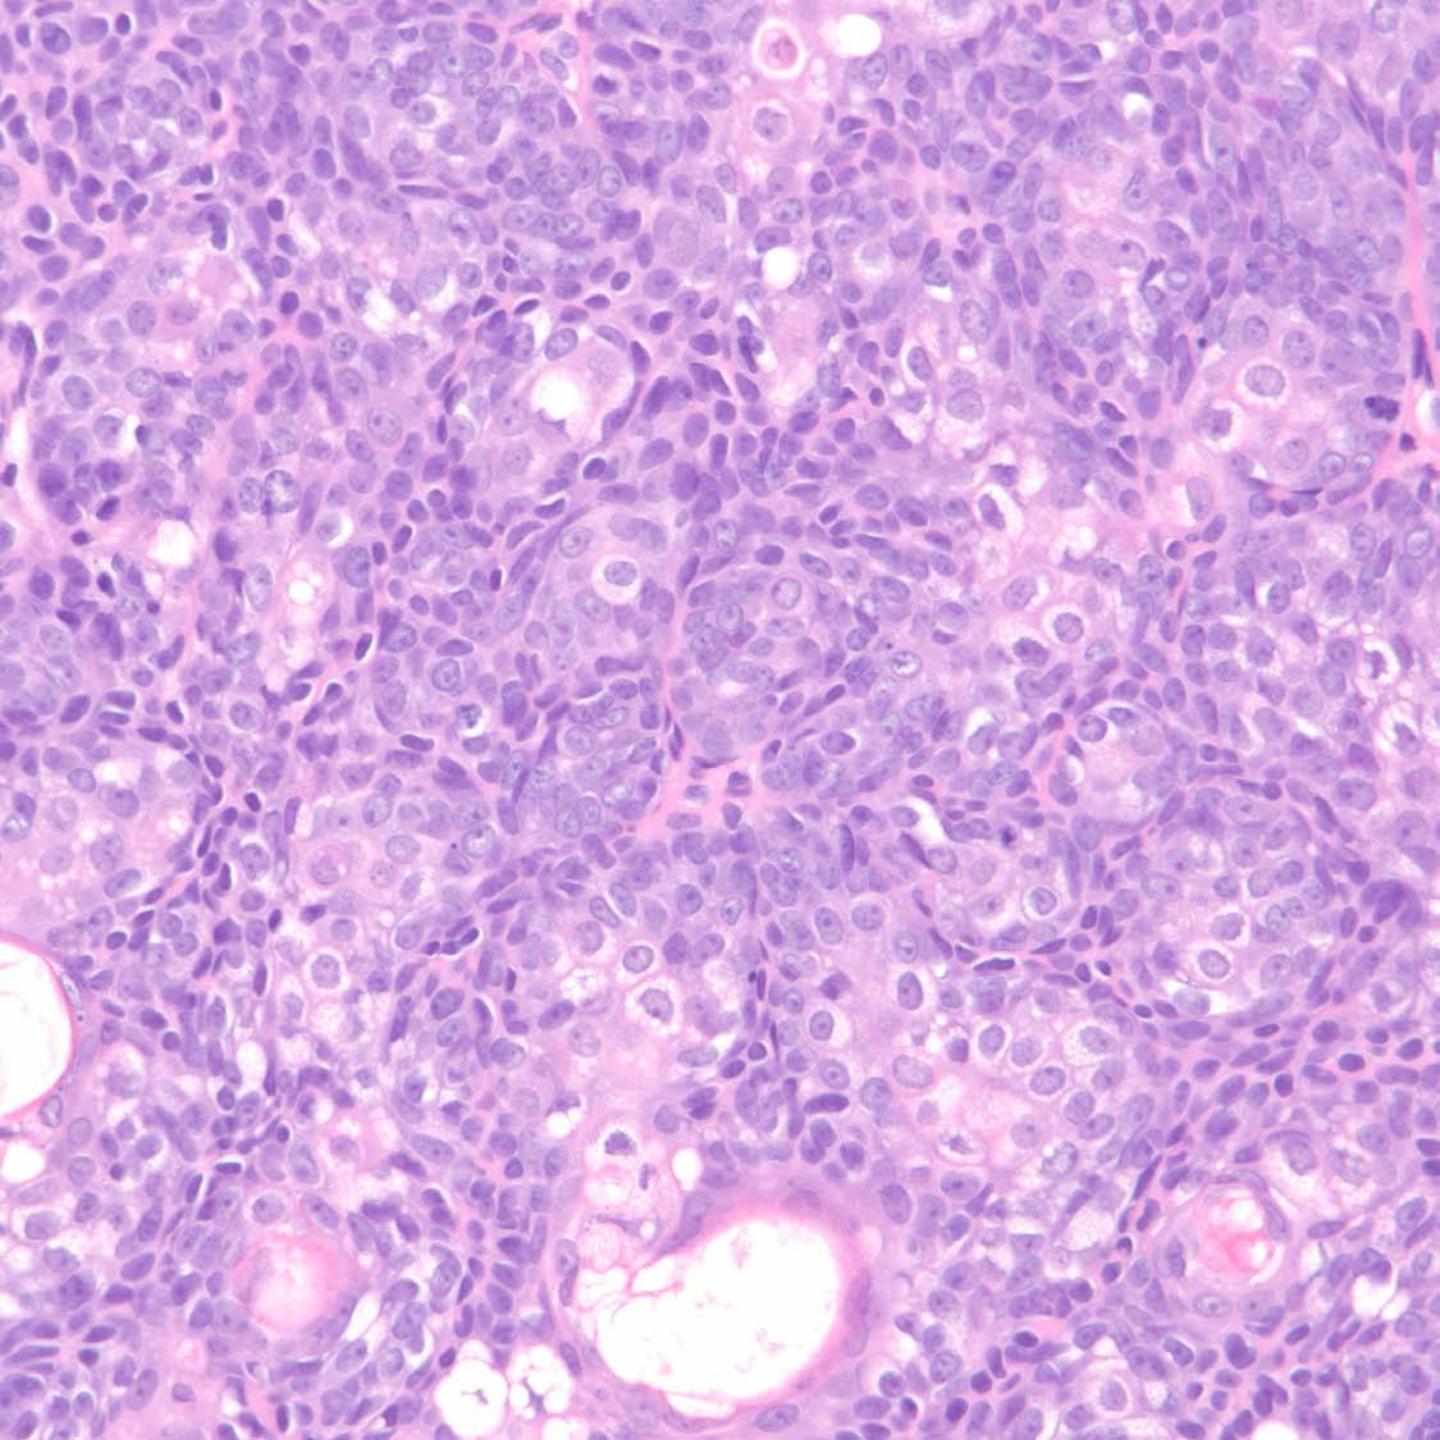

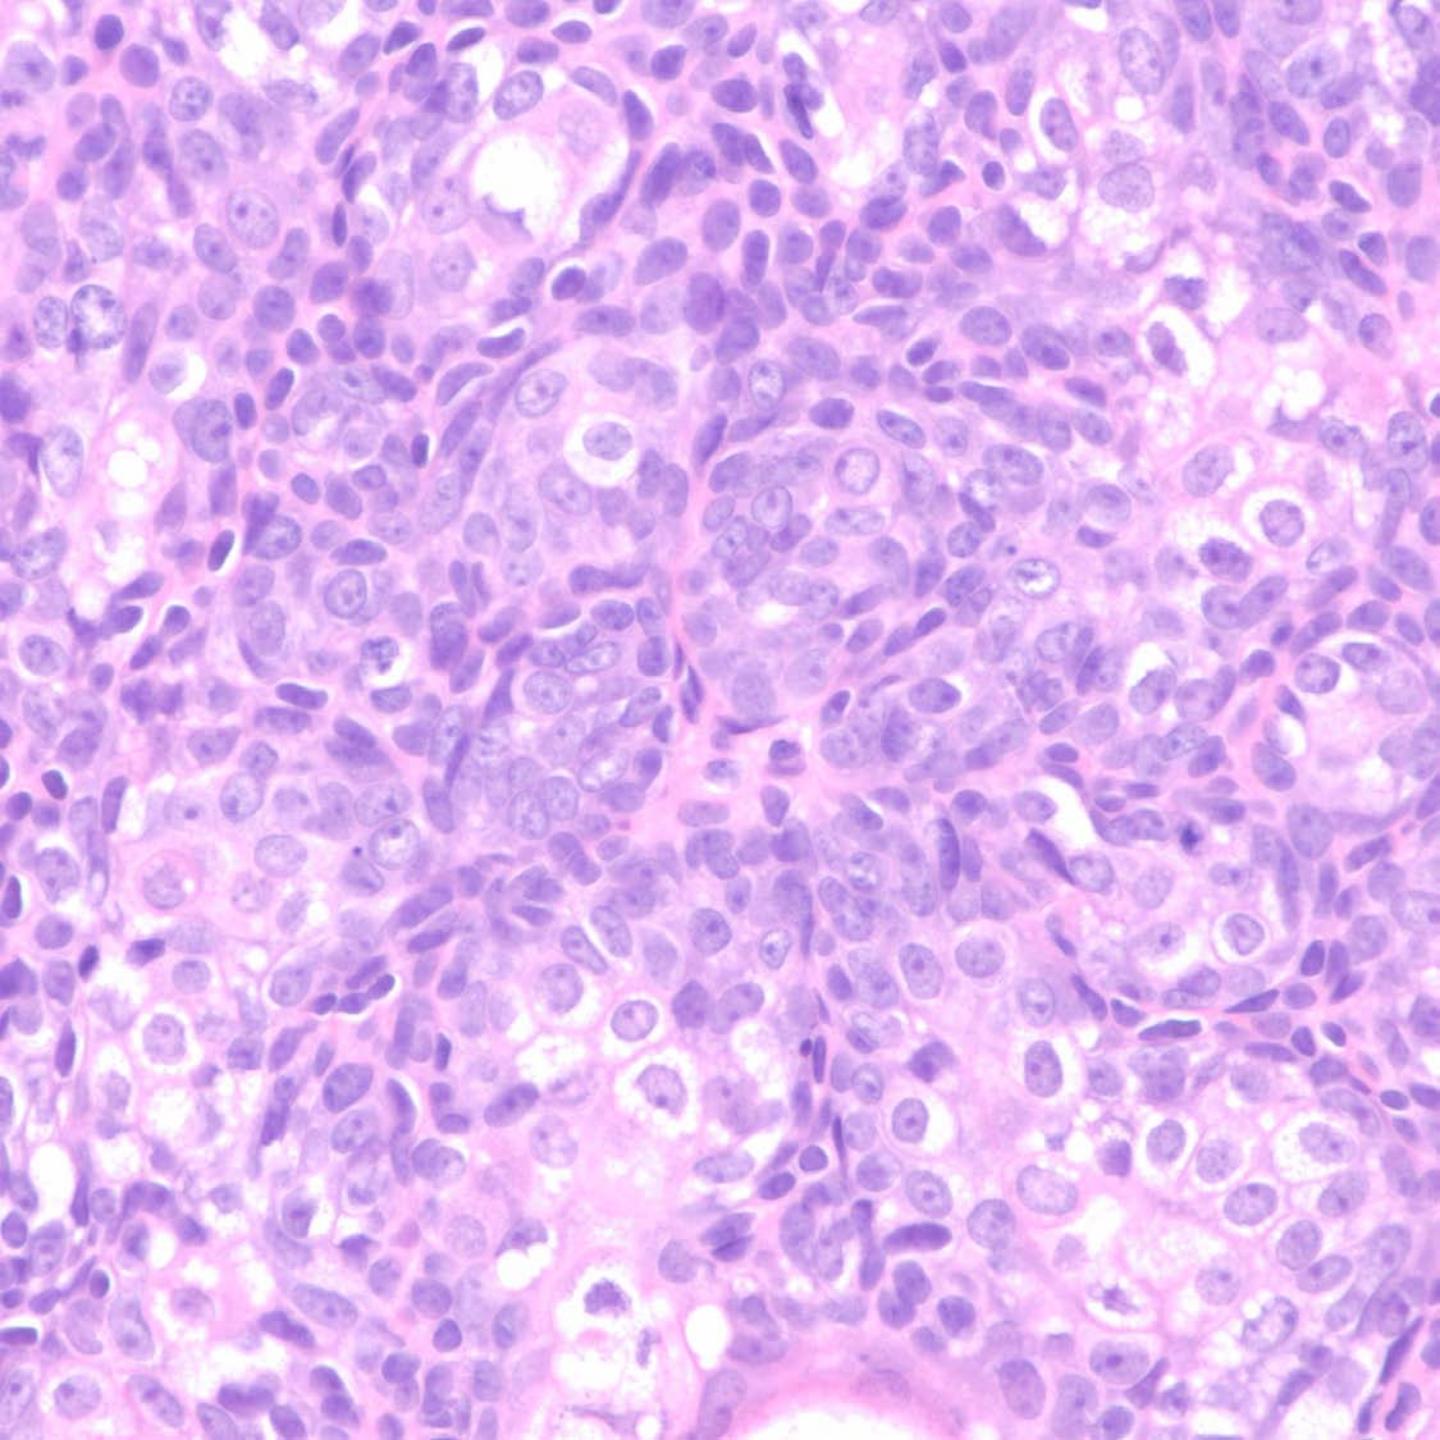

- Palisading necrobiotic granuloma, usually superficial dermis
- Minimal atypia of histiocytes
- Necrobiosis usually rich with mucin
- DDX: Rheumatoid nodule, pseudorheumatoid nodule

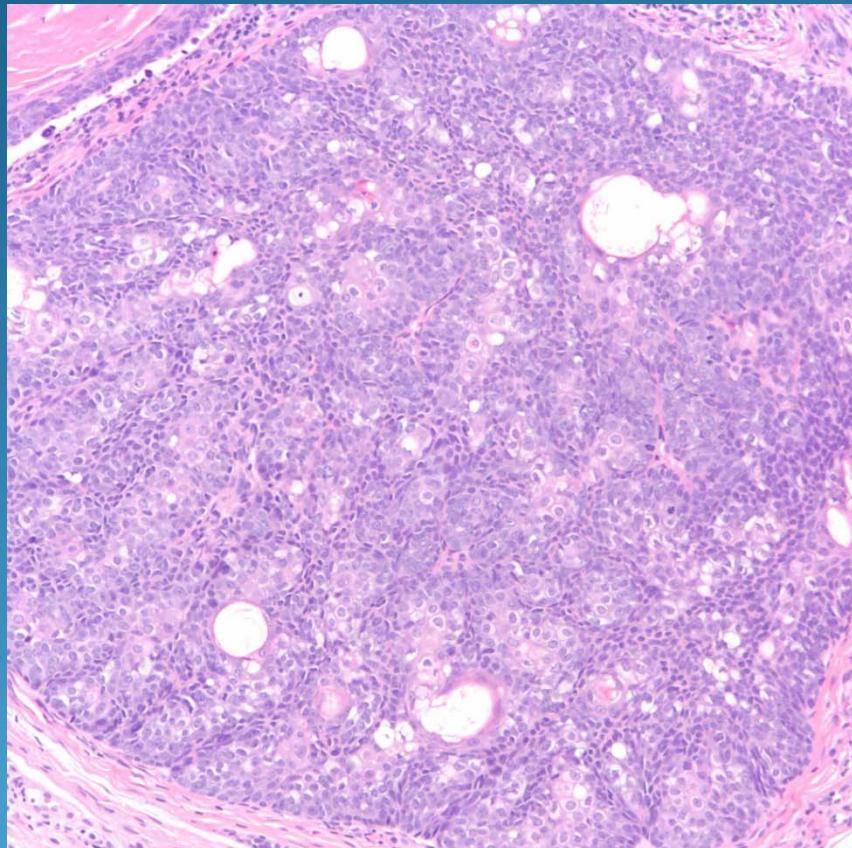

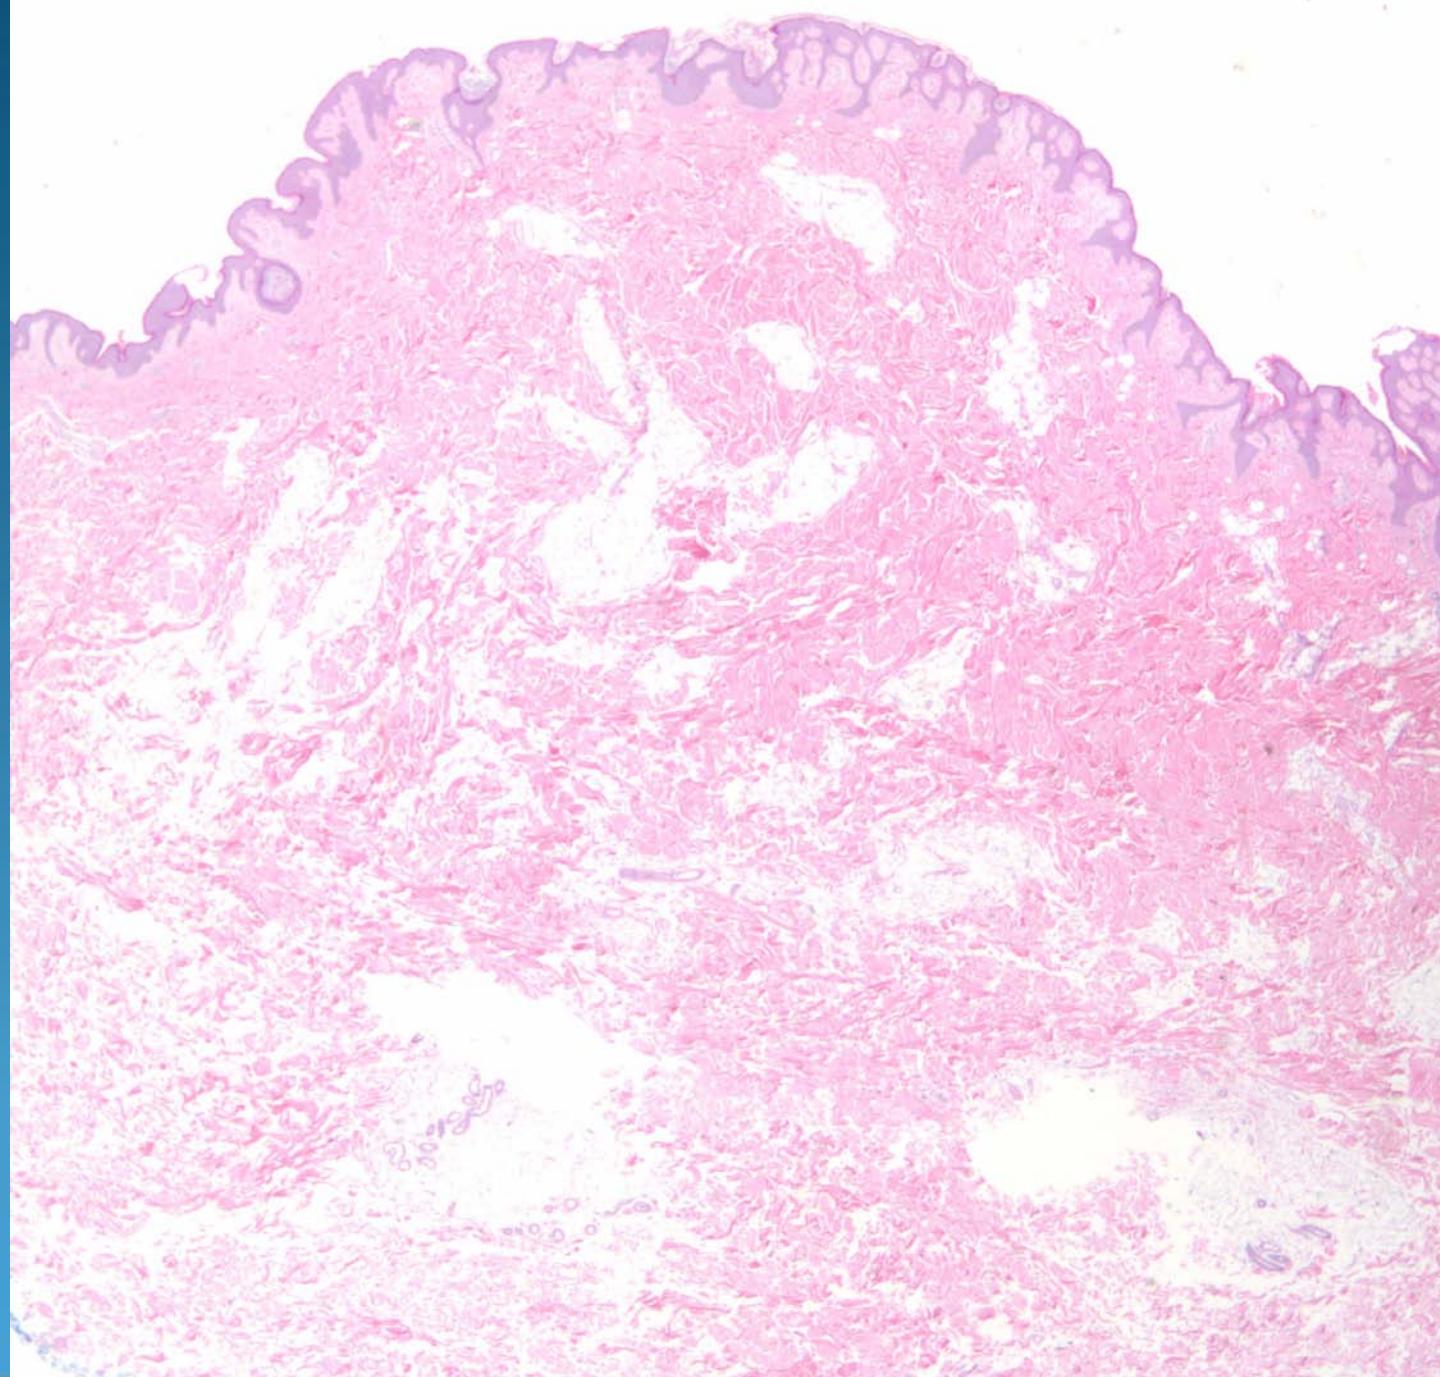

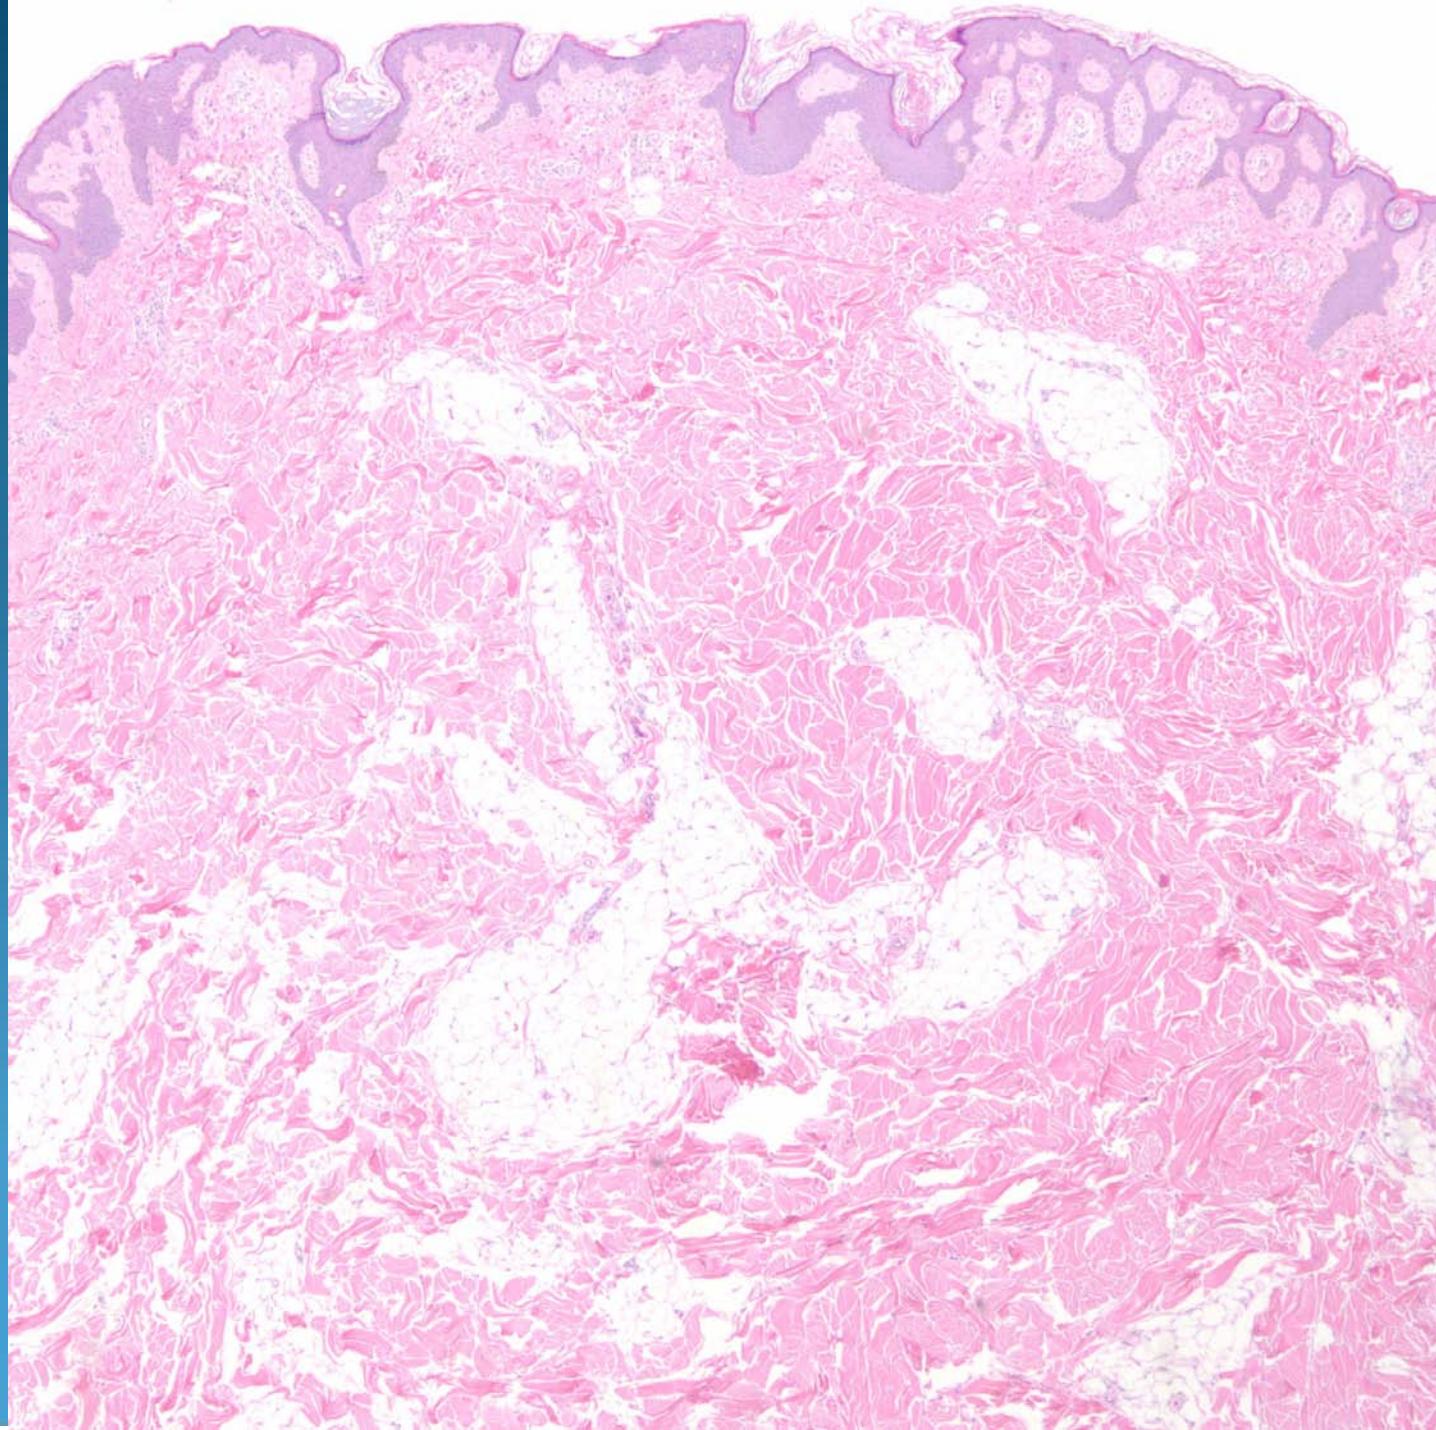

Sebaceous Adenoma

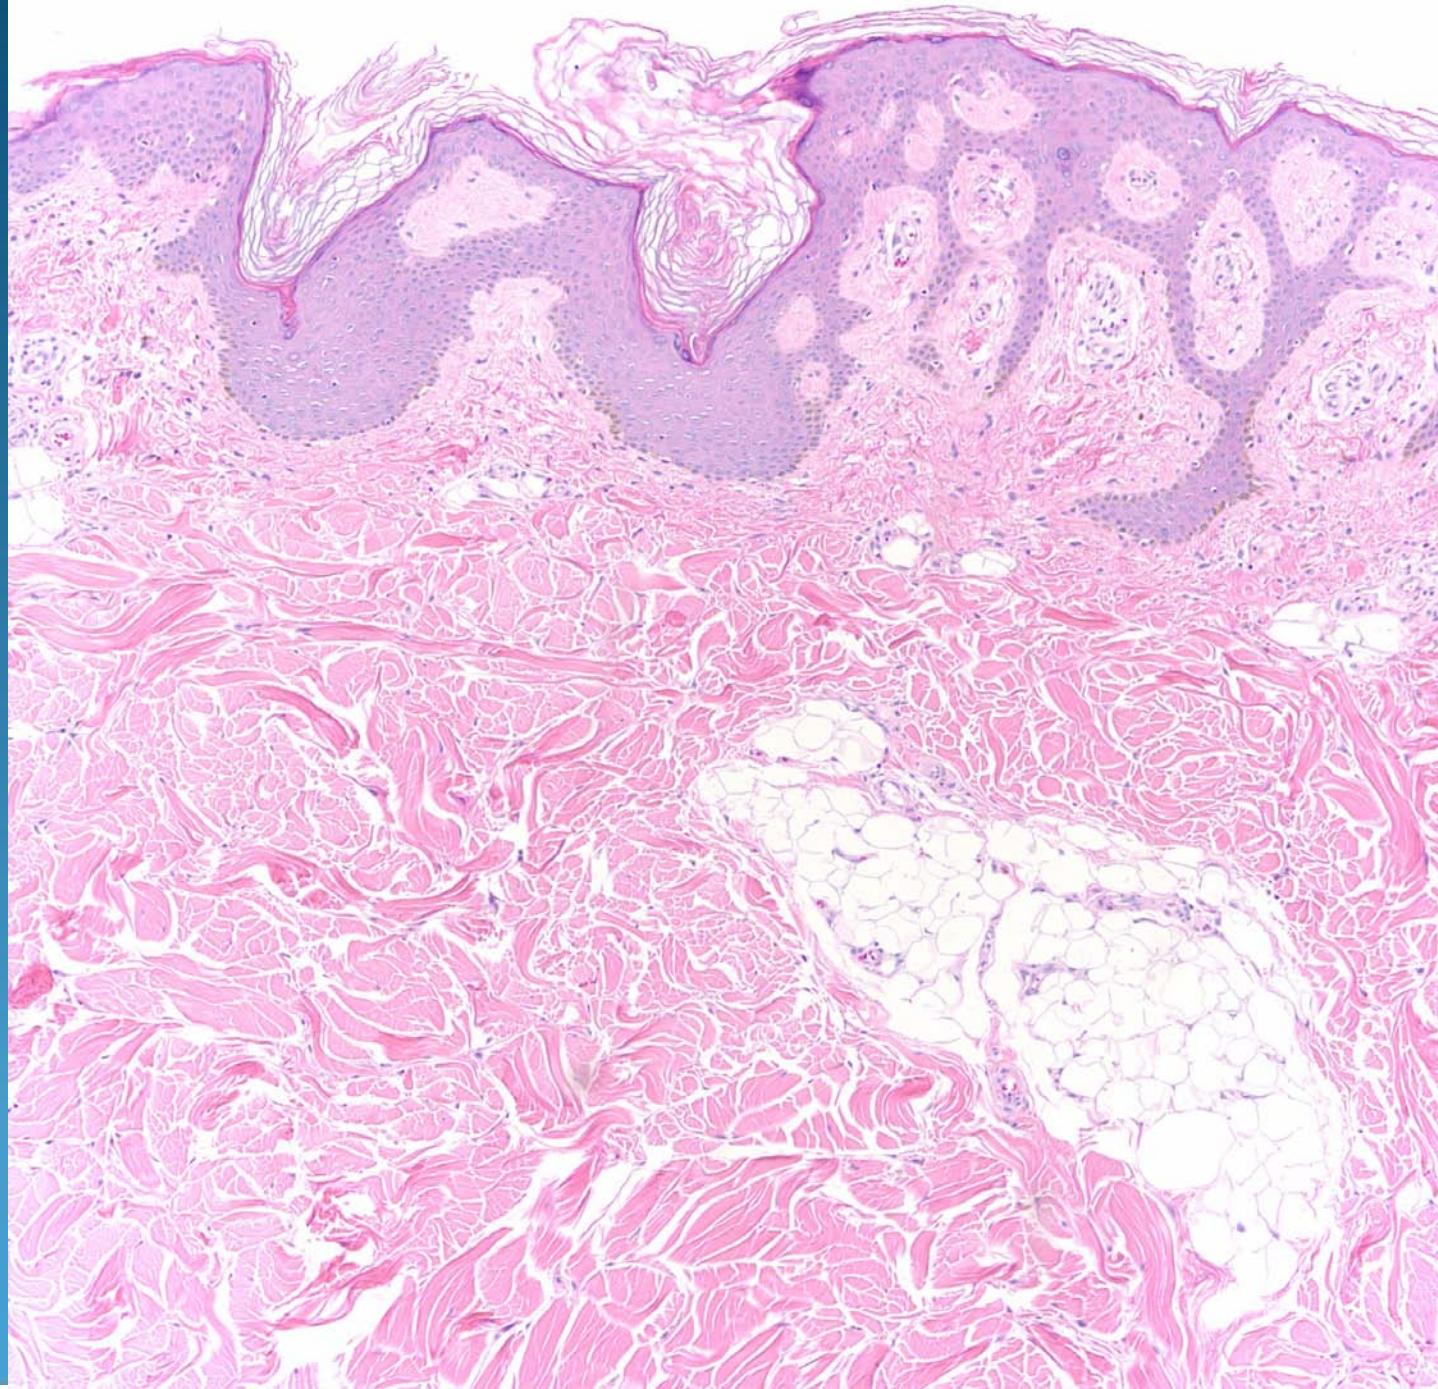

Pearls

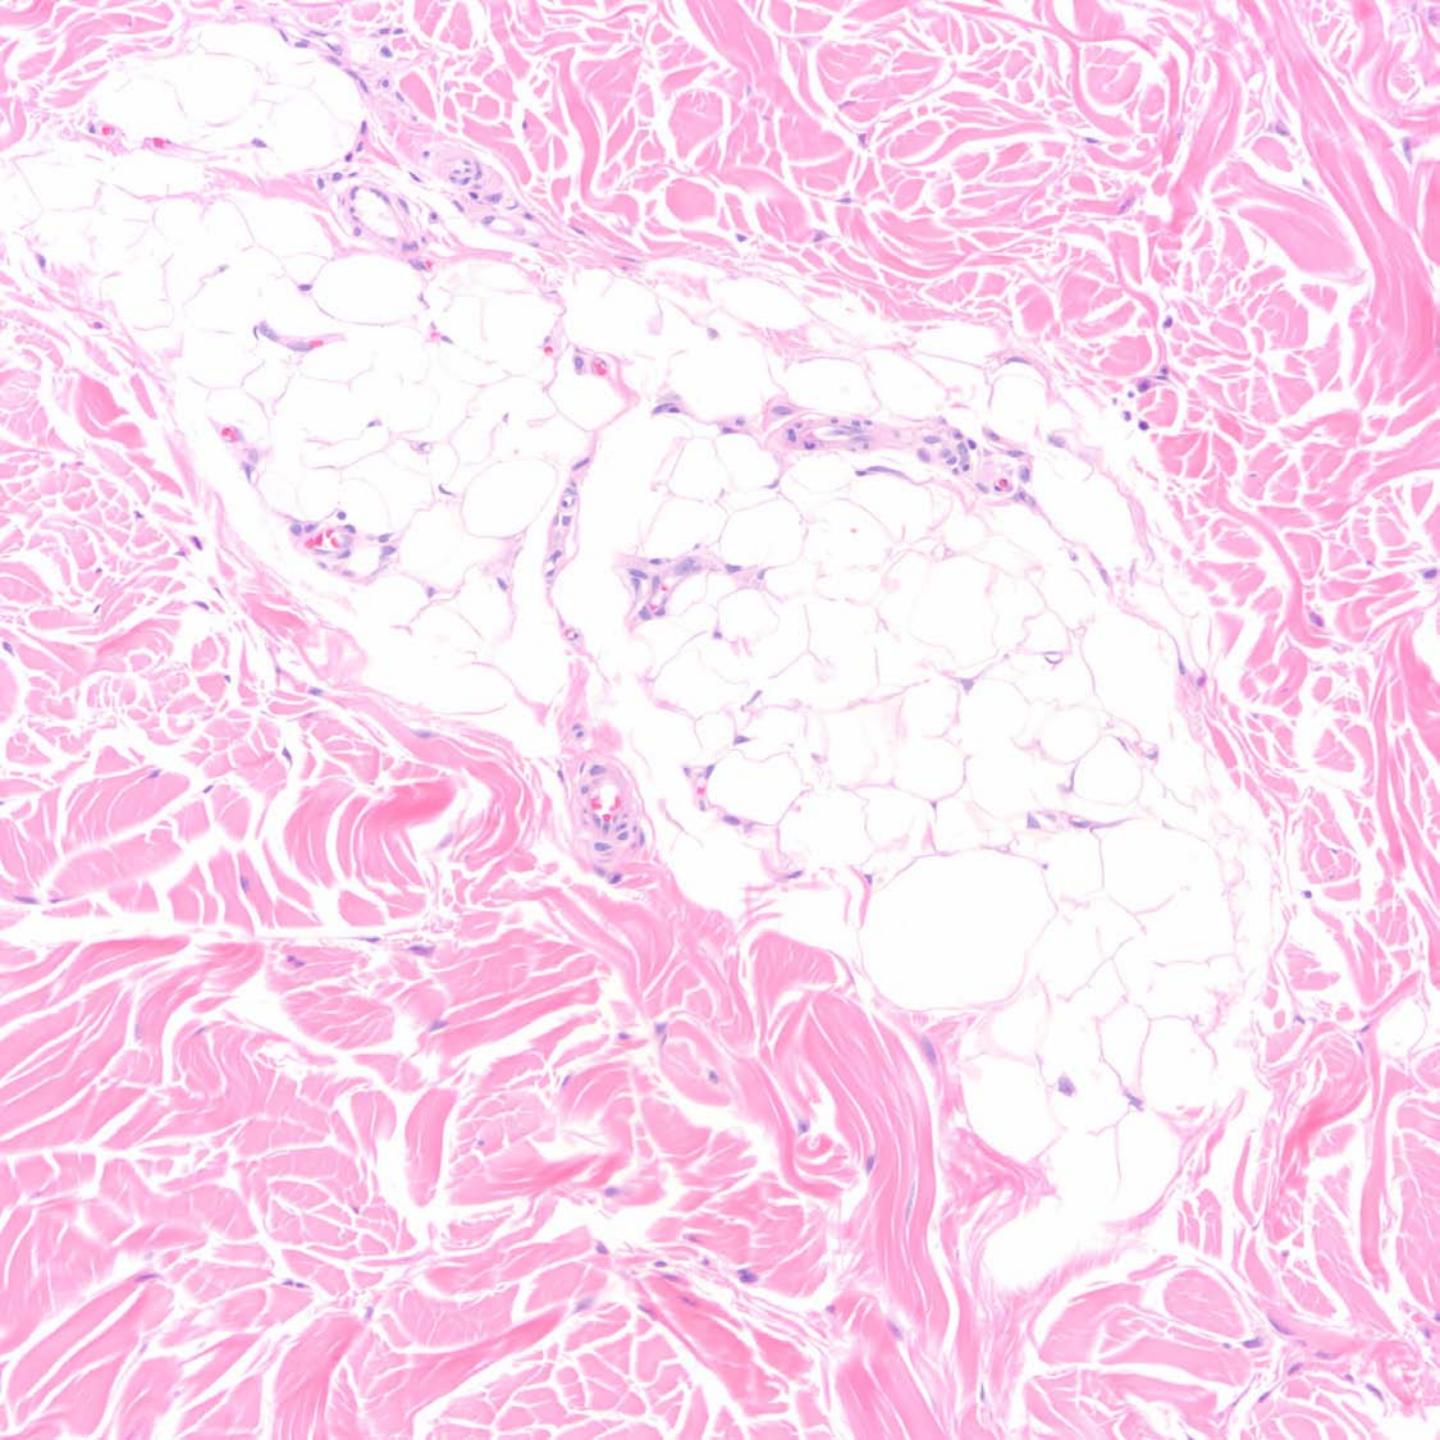

- Circumscribed basaloid neoplasm attached to undersurface of epidermis
- Orderly maturation of sebocytes from periphery to inner layer of basaloid cells
- Rare non-atypical mitotic figures

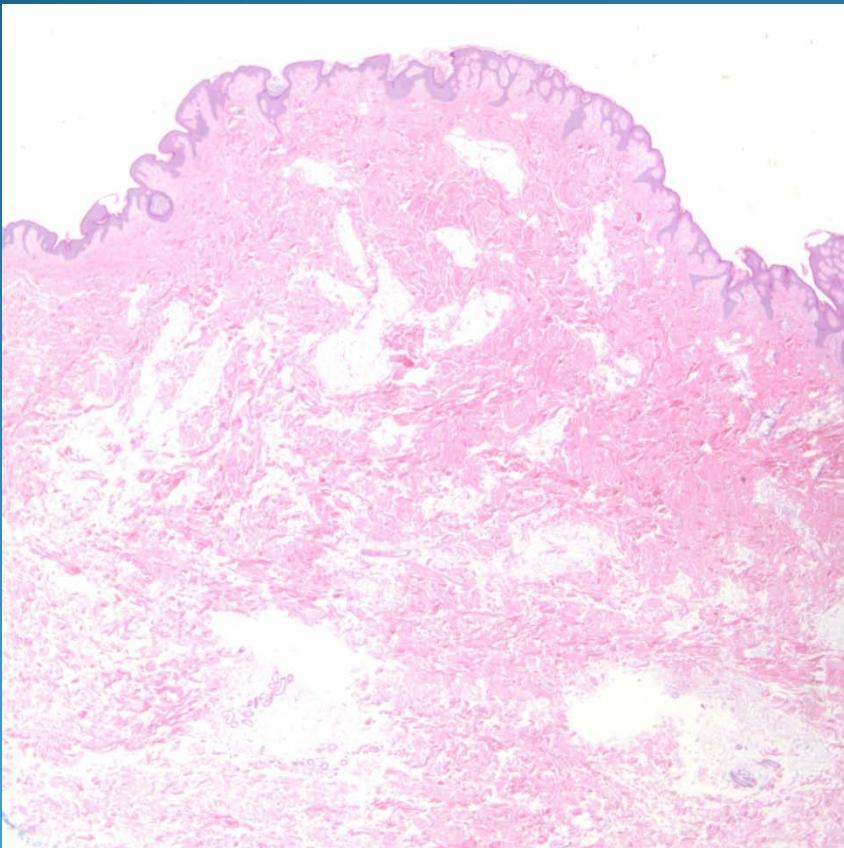

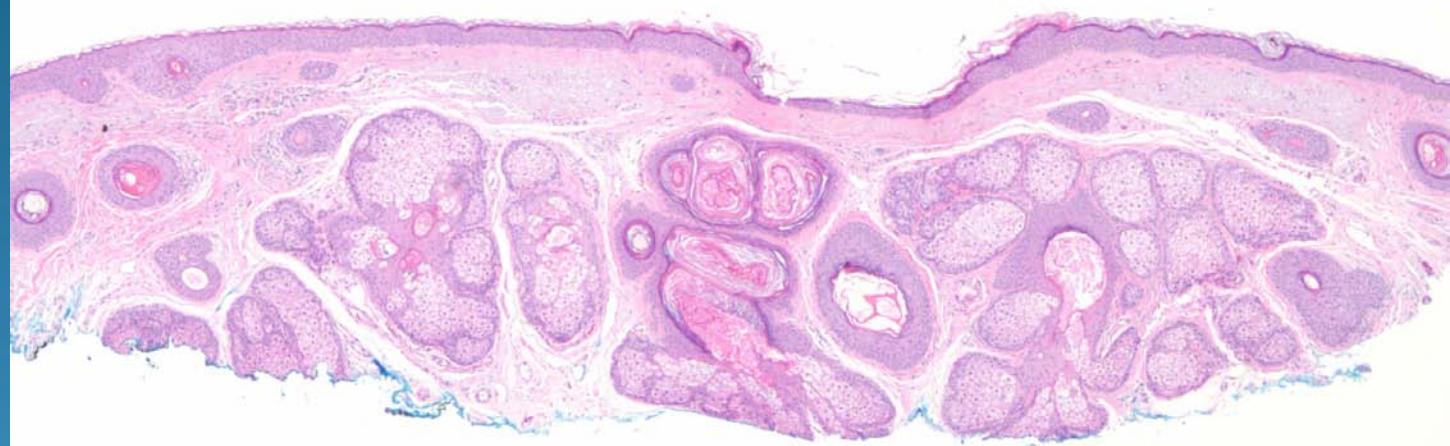

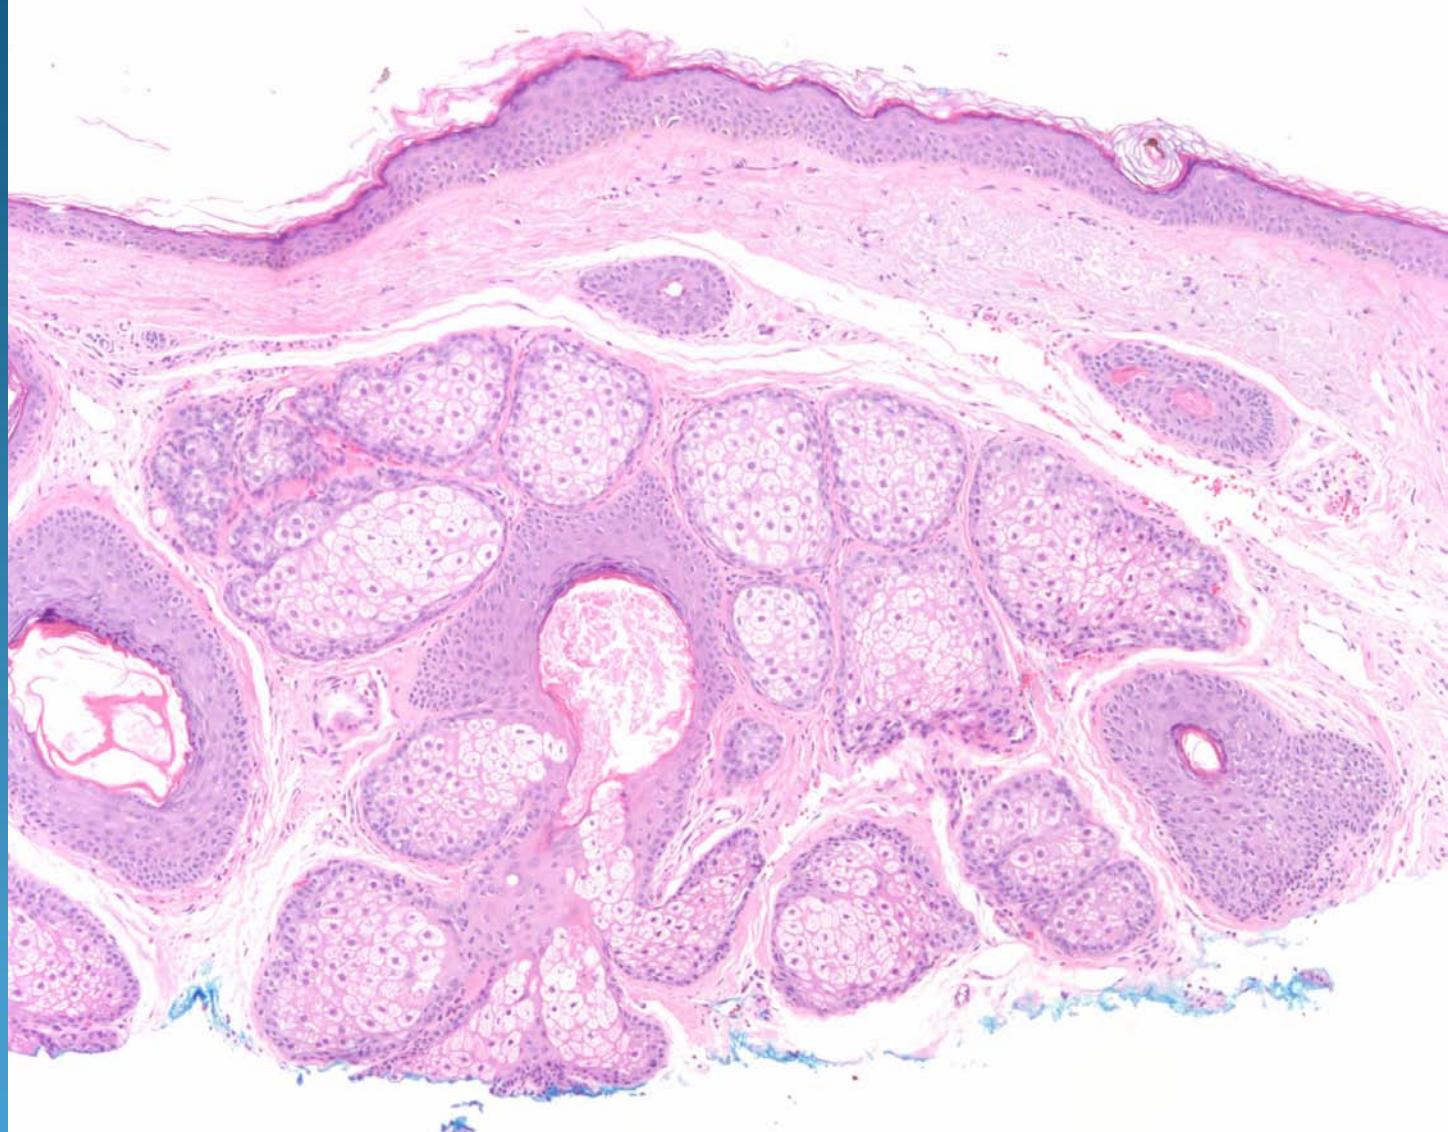

Nevus lipomatosis

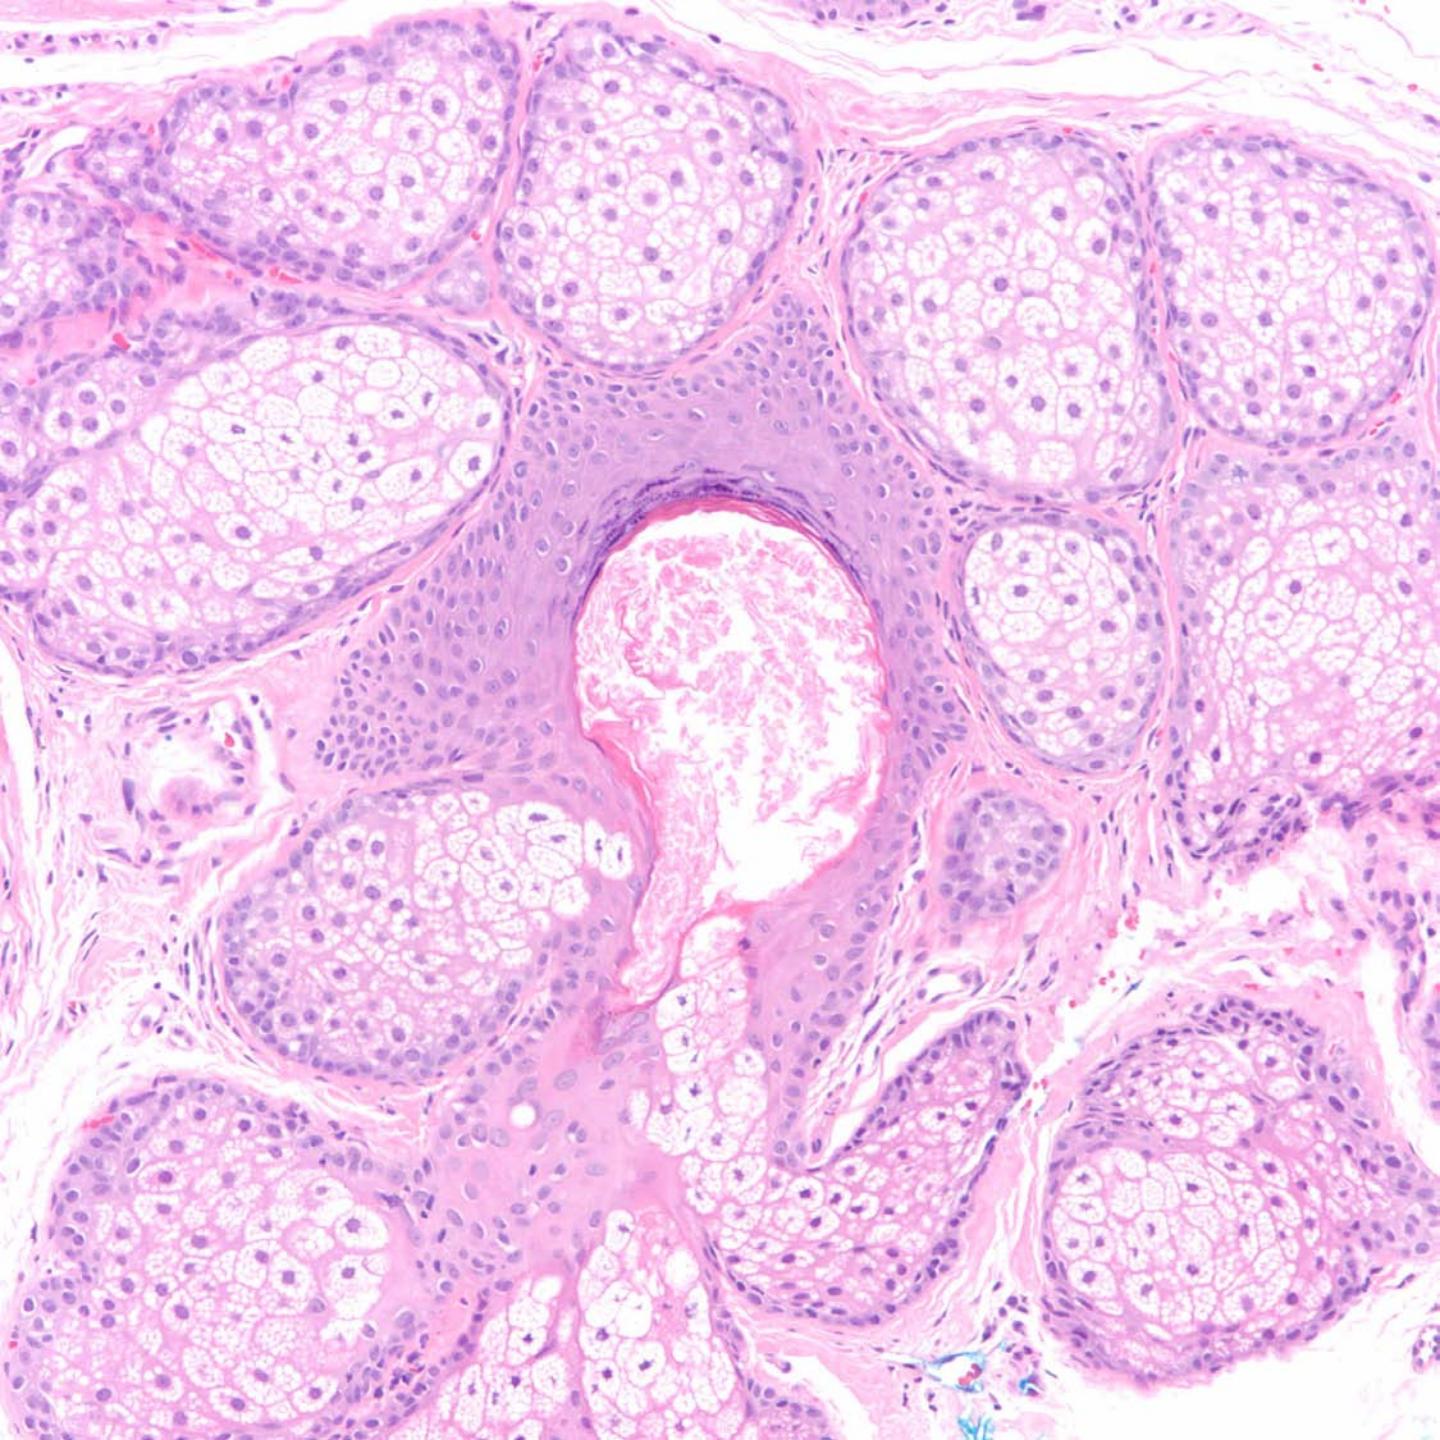

Pearls

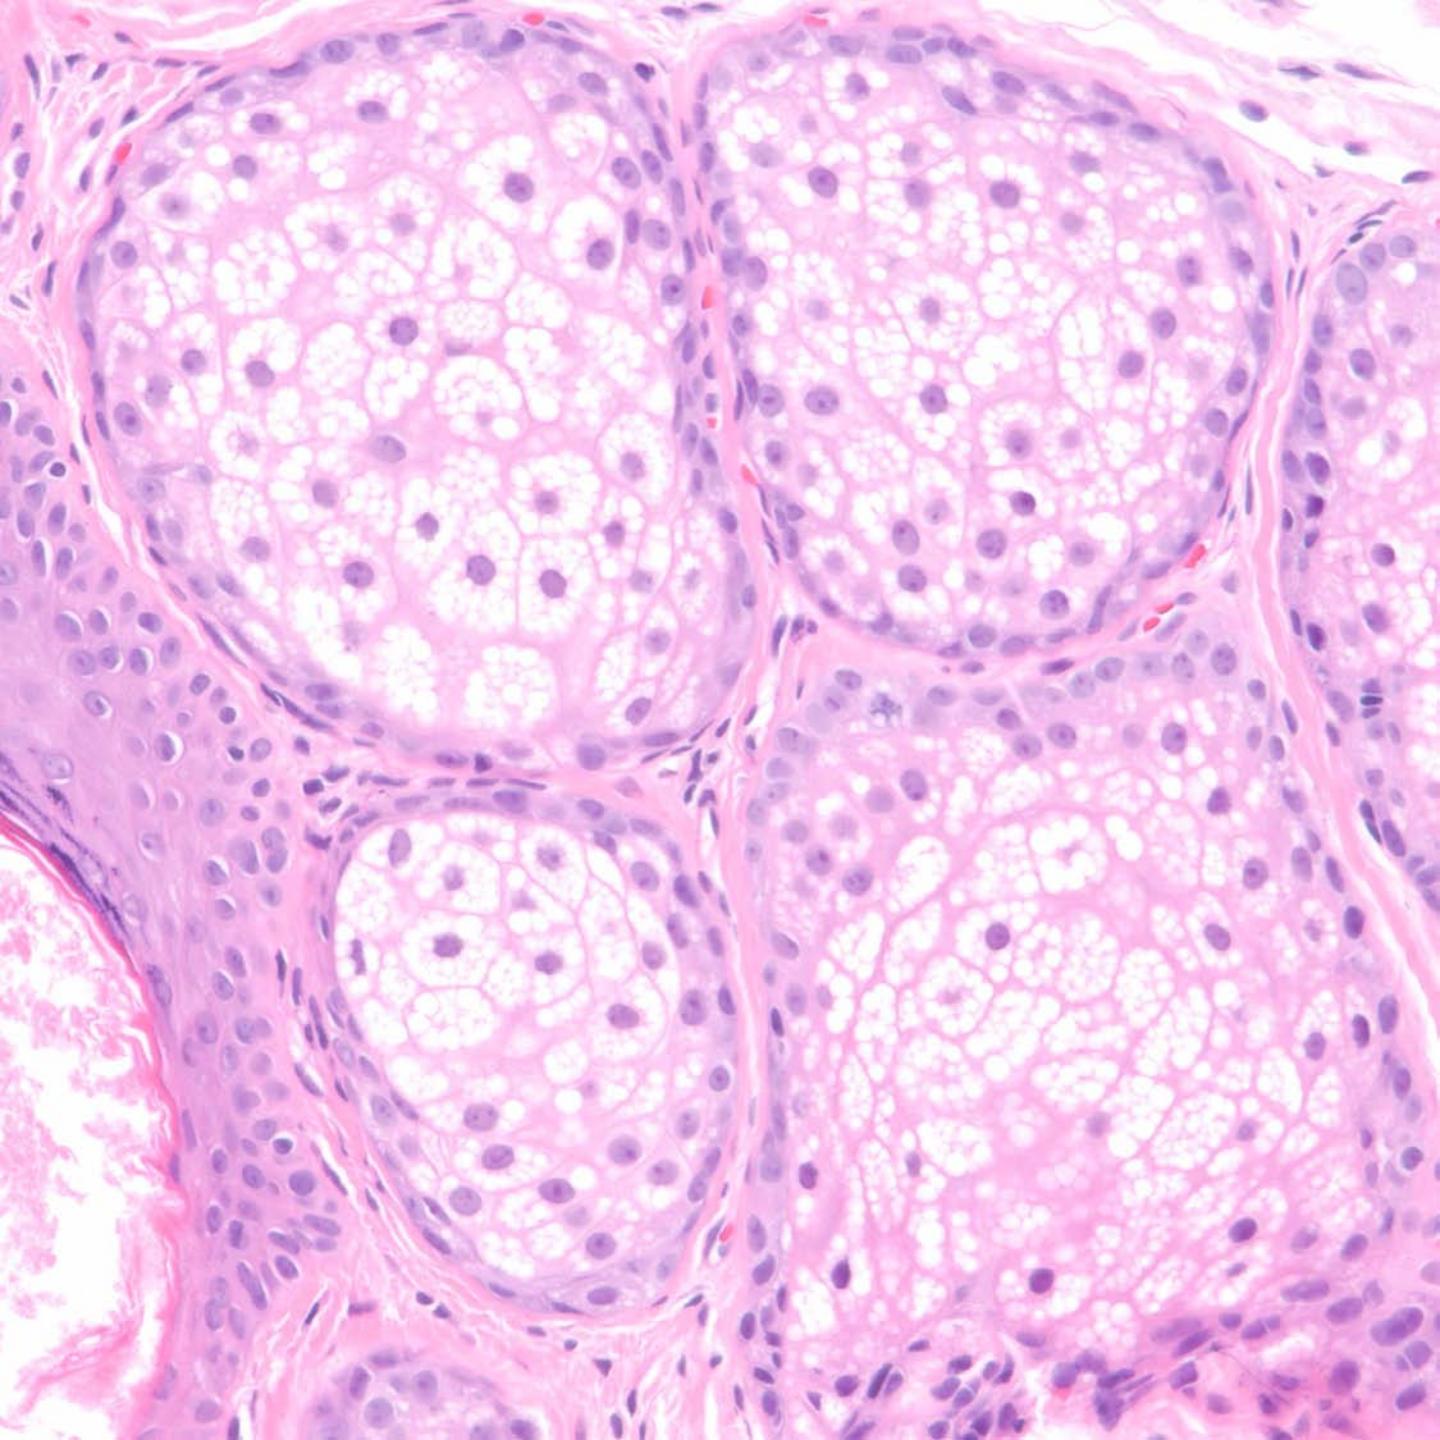

- Nodular collection of mature adipose tissue extending into papillary dermis
- Overlying epidermis with variable hyperplasia and papillomatosis

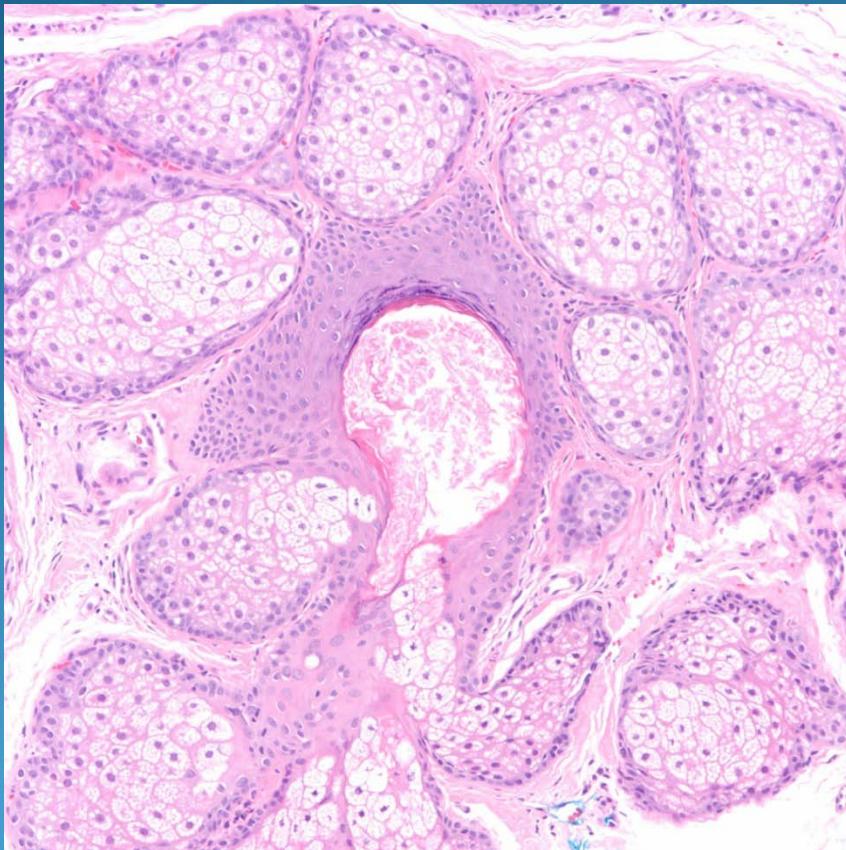

Sebaceous Gland Hyperplasia

Pearls

- Circumferential proliferation of mature sebaceous glands around a hair follicle
- No cytologic atypia
