Pigmentary Disorders of the Skin

Paul K. Shitabata, M.D.
Director of Dermatopathology
Harbor-UCLA Dermatology Pathology Inc.
Diseases classified under reticulate pigmentary anomalies include:

1. Acropigmentation of Kitamura
2. Kimura’s disease
3. Dowling-Degos disease
4. Degos Disease
5. Naegeli-Franceschetti-Jadassohn syndrome

May have more than one answer
1. Acropigmentation of Kitamura
3. Dowling-Degos disease
5. Naegeli-Franceschetti-Jadassohn syndrome
Which disease does not usually exhibit melanophages in the dermis?

A. Melasma
B. Phytophotodermatitis
C. Addison’s disease
D. Linear and whorled nevoid hypermelanosis
E. Vitiligo

May have more than one answer
A. Melasma
E. Vitiligo
Common disease associations with vitiligo include:

A. Aseptic meningitis
B. Hirsuitism
C. Addison’s disease
D. Uveitis
E. Diabetes mellitus

May have more than one answer
A. Aseptic meningitis
C. Addison’s disease
D. Uveitis
E. Diabetes mellitus
Associated findings of Chediak-Higashi syndrome include:

A. Increased cathepsin B levels
B. Giant melanosomes
C. Dermal melanophages
D. Increased melanin granules
E. Giant lysosomal granules in peripheral blood and skin

May have more than one answer
B. Giant melanosomes
D. Increased melanin granules
E. Giant lysosomal granules in peripheral blood and skin
