

Relevant differential diagnostic considerations include all except:

- A. Neurofibroma
- B. Atypical fibroxanthoma
- C. Sarcomatoid carcinoma
- D. Leiomyosarcoma
- E. Spindle cell melanoma

# A-Neurofibroma

- This is an atypical fibroxanthoma (AFX)
- Pertinent immunohistochemical stains included focal positivity for CD68 and negative stains for CK, S100, CD34, CD31, SMA, and p63
