

What is the best diagnosis?

- A. Erythema chronicum migrans
- B. Lepromatous leprosy
- C. Eruptive xanthoma
- D. Scleromyxedema
- E. Herpes Zoster virus infection

Lepromatous Leprosy

Fite Stain

Pearls

- Look for perineural lymphocytic infiltrate
- Variable inflammatory response depending upon immune status of patient
- Scattered histiocytes and neutrophils
- Always get Fite stain to confirm.
