

# What is the best diagnosis?

- A. Sarcoidosis
- B. Lupus vulgaris
- C. Granulomatous slack skin disease
- D. Actinic granuloma
- E. Blastomycosis

Lupus vulgaris

# Pearls

- Clinical-pathological correlation
- Caseating granulomas
- Special stains (AFB, PAS, GMS) negative
- History of TB exposure or disease, considered a tuberculid reaction
- DDX: Granulomatous rosacea, perioral dermatitis
