

PAS with Diastase Digestion

CEA-Polyclonal

D2-40 (Podoplanin)

Mucinous Carcinoma of the Skin

Notes

- Rare tumor, always exclude the remote possibility of a mucinous carcinoma of a visceral organ metastasizing to the skin
- Cytologically bland cells with lakes of mucin
 - Mucin is PAS positive Diastase resistant
 - Contrast with BCC
- May deeply infiltrate surrounding tissue
- Immunohistochemical studies may be helpful to confirm primary tumor
 - Typically D2-40 positive
