

What is the best diagnosis?

- A. Secondary syphilis
- B. Leishmaniasis
- C. Mycosis fungoides
- D. Diffuse large B-cell lymphoma
- E. Plasmacytoma

Plasmacytoma (Cutaneous Marginal Zone Lymphoma)

Kappa light chain

Lambda light Chain

Pearls

- Diffuse and nodular collection of plasma cells
- May be in varying stages of maturation
- Always rule out inflammatory condition which may mimic neoplastic process
- Confirm with light chain and Ig gene rearrangement
- Clinical-pathological correlation, rule out systemic plasma cell dyscrasia with secondary involvement of skin
